

**Exam Code:** HP0-876

**Exam Name:** Implementing HP ProLiant Cluster Solutions  
for NetWare 6

**Vendor:** HP

**Version:** DEMO

## **Part: A**

1: Which three tasks are required when configuring shared storage on a StorageWorks Modular Array 8000? (Choose three.)

- A. Adding drives to the new storage subsystem
- B. Ensuring new logical unit numbers are accessible
- C. Configuring the HSG80 controller ports to the appropriate topology
- D. Adding more cache to the HSG80 controllers

**Correct Answers: A B C**

2: To add a new Novell Cluster Services node to a cluster, which utility should be used from what location?

- A. NetWare Deployment Manager (nwdeploy.exe) from the master node
- B. NetWare Deployment Manager (nwdeploy.exe) from a NetWare client workstation
- C. NetWare Deployment Manager (nwdeploy.exe) from any cluster node
- D. NetWare Deployment Manager (nwdeploy.exe) from the node to be added

**Correct Answers: B**

3: Which two items does SANworks Secure Path by Compaq use to authenticate and authorize clients? (Choose two.)

- A. Secure Path HOSTs resolution file
- B. Novell eDirectory
- C. Name-to-IP address resolution and password verification
- D. Server-to-IP address resolution and password verification
- E. Secure Path configuration database
- F. Compaq Management Agents

**Correct Answers: C E**

4: What is the optimal way to test a cluster installation?

- A. Void the cluster volume.
- B. Unplug the Fibre Channel cables.
- C. Inject a failure on the cluster-enabled volume.
- D. Migrate the cluster-enabled volume to another node.

**Correct Answers: D**

5: What is the default convention for naming cluster-enabled volume objects?

- A. Cluster Name\_Server Name
- B. Cluster Object Name\_Server Name
- C. Cluster Name\_Volume Name
- D. Cluster Object Name\_Volume Name

**Correct Answers: C**

6: Which two RAID levels should you use to ensure fault tolerance in RA4100 shared storage? (Choose two.)

- A.0
- B.1
- C.3
- D.4
- E.5

**Correct Answers: B D**

7: Which two storage systems can be configured with the offline Array Configuration Utility or cpqonlin.nlm? (Choose two.)

- A.StorageWorks Modular Array 8000
- B.StorageWorks RAID Array 4100
- C.Smart Array Cluster Storage
- D.CR3500 Shared SCSI Storage

**Correct Answers: B C**

8: You have installed cluster-aware applications on a cluster and want to take advantage of protected memory space for high availability. Which method should you deploy to use the protected memory space?

- A.Load and unload scripts
- B.Cluster-aware applications
- C.Compaq Management Agents
- D.Novell Cluster Services Loadable Modules agents

**Correct Answers: A**

9: When a resource is migrated to a cluster node, which event must be initiated using a load script?

- A.Deactivate the master node
- B.Mount and dismount volumes
- C.Join a resource to a server
- D.Configure the load and unload scripts

**Correct Answers: B**

10: Which two characteristics define cluster-aware applications? (Choose two.)

- A.They have been written to take advantage of the Novell Cluster Services application programming interface.
- B.They behave in the same manner as they do on a stand-alone server.
- C.They have been written for the automatic creation and configuration of the cluster resources and groups.
- D.They do not have the ability to automatically initiate a failover upon sensing an application fault.
- E.They behave in a manner that requires changes to the configuration of an application on one node to be manually replicated to the standby application.

**Correct Answers: A C**

11: Which three criteria should be considered when planning the servers for a clustering solution?

(Choose three.)

- A. Business impact if server functionality is lost
- B. Network bandwidth requirements
- C. Percentage of acceptable downtime
- D. Physical distance between servers and clients
- E. Expansion requirements

**Correct Answers: A C E**

12: What type of communication occurs over a dedicated Novell Cluster Services intranode connection?

- A. Public LAN information
- B. Client data pertaining to the failed access of clustered resources
- C. Heartbeat signals and information about the health of the active cluster nodes
- D. Mirrored data between servers

**Correct Answers: C**

13: Which RAID level is appropriate for a business that requires both the highest performance of the storage system and the lowest risk to data?

- A. 0
- B. 1
- C. 1+0
- D. 4
- E. 5
- F. 3/5
- G. Advanced Data Guarding

**Correct Answers: C**

14: What is the safest procedure to follow if a fault occurs during backup of a cluster?

- A. Point the tape backup software to a logical network drive served by the cluster rather than the drive of an individual physical node.
- B. Restart the backup session from the beginning of the process.
- C. Configure the backup software to switch to the partner node and resume the backup.
- D. Restart the backup session from a period before the beginning of the fault.
- E. Restart the backup session and back up only those files with their archive bit set.

**Correct Answers: B**

15: What are two basic elements of a cluster? (Choose two.)

- A. Disaster recovery
- B. Redundant components
- C. Fault tolerance
- D. Interconnects
- E. Shared physical storage
- F. Dual data paths

**Correct Answers: D E**
