- B. System_State\
- C. LOCAL_DRIVES

D. Active_Directory:\

Answer: B

QUESTION 15

A heavily used database server must be configured as a NetBackup client. The database application is custom built and is NOT covered by a NetBackup database agent. The solution must conform to the following conditions:

The server is in production around-the-clock.

Backups must not interrupt production.

Open files must be backed up.

Backups must have a minimal effect on client disk I/O and CPU.

The DB data exists on SAN attached disks and disk space is readily available. Which backup method would best fit this scenario?

- A. nondatabase option policy
- B. mirror snapshot
- C. VERITAS Snapshot Provider enabled backup
- D. block level incremental backups

Answer: B

QUESTION 16

Which is the only Media Manager supported robot that is NOT supported by Vault?

- A. ACS
- B. ODL
- C. TLD
- D. TLH

Answer: B

QUESTION 17

Which setting in the Host Properties > Media of a master/media server can be changed to allow NetBackup to use media that was written to by another program?

- A. Allowable Media > Other
- B. Media Selections > Use Any
