A database server has its logs stored on a volume on the log source Symmetrix V-Max array and its data stored on a volume on the data source Symmetrix V-Max array. Both source Symmetrix V-Max array frames replicate data to the target Symmetrix V-Max array at the Remote site. There are two device groups that have been defined:

One group for the data volume on the Symmetrix containing the data LUNs

One group for the log volume on the Symmetrix containing the log LUNs

What happens if the SRDF links between the Symmetrix containing the data LUNs and the target Symmetrix were to fail?

- A. The R2 data in the database remains consistent because Engineuity Consistency Assist (RDFECAJ technology works
- B. The data in the database becomes inconsistent at the Remote site.
