- F. Red Hat Linux 5 Enterprise/Advanced (64 bit)

Answer: BCF

QUESTION 6

Which statement correctly defines the Any option in the scope of an impact rule?

- A. Every CI for the trigger must match the condition.
- B. At least a single CI in the trigger matches the condition.
- C. No CIs for the trigger match the condition.
ActualTests.com
- D. A percentage of CIs in the trigger match the condition.

Answer: B

QUESTION 7

Which statement is true about state and status in UCMDB?

- A. The state is an indicator of whether the rule is used for operational or change and the status is the value for the impact analysis.
- B. The state is a Boolean value used to trigger an impact analysis rule and the status is the result of the impact analysis rule execution.
- C. The state is the indicator for the progress of the impact analysis rule and the status indicates if the rule is on or off.
- D. The state is the value for the impact analysis stored in an attribute of the CI and the status is a visual display of the state in a topology map.

Answer: D

QUESTION 8

Which statement is true about trigger and impacted nodes?

- A. The trigger node starts a timer event; the impacted node receives the results from the event.
- B. The trigger node defines the impact; the impacted node shows how many nodes are impacted.
- C. The trigger node is the starting point for the impact rule; the affected node is the root cause.
- D. The trigger node is the cause; the impacted node is the effect in a cause and effect relationship.

Answer: D
