A. evaluating event data
B. applying event categories
C. applying hashing to event data
D. correlating event data
E. normalizing event data

Answer: BE

QUESTION 2
What do the start and end times associated with a notification destination indicate?

A. the period of time that the system waits for a notification response
B. the period of time during which the notification can be received
C. the period of time during which the destination is expected to respond
D. the period of time during which the notification can be sent to the destination

Answer: D

QUESTION 3
Which functions are on the right-click menu for an event in the ConsoleViewer panel? (Select two.)

A. Correlate Events
B. Show Event Details
C. Show Event Chart
D. Annotate Events
E. Prioritize Events

Answer: CE

QUESTION 4
Which statement best describes how baselines are established and used in Query Viewers?

A. Baselines are created using query results, which are fed into the Image Editor for filtering and display in the related Data Monitor.
B. Baselines are created using rules. After the rule is triggered, the resulting action establishes a baseline against which future rules are evaluated in the Query Viewer.
C. Baselines are created using query results. When a query has one or more baselines available, you can compare the current results with a baseline.
D. Baselines are created using query results. The baseline from the query is used to create a new field set definition that can be run against future events.

Answer: B

QUESTION 5
From where are the local ArcSight Console Preference Settings accessed?
