

Vendor: Microsoft

Exam Code: 70-742

Exam Name: Identity with Windows Server 2016

Version: DEMO

QUESTION 1

You have a server named Server1 that runs Windows Server 2016.
You need to configure Server1 as a Web Application Proxy.
Which server role or role service should you install on Server1?

- A. Remote Access
- B. Active Directory Federation Services
- C. Web Server (IIS)
- D. DirectAccess and VPN (RAS)
- E. Network Policy and Access Services

Answer: A

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2.

Contoso.com has the following configuration:

```
PS C:\> (Get-ADForest).ForestMode
Windows2008R2Forest
PS C:\> (Get-ADDomain).DomainMode
Windows2008R2Domain
PS C:\>
```

You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration.

You need to configure Active Directory to support the planned deployment. Solution: You raise the domain functional level to Windows Server 2012 R2.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Device Registration requires Windows Server 2012 R2 forest schema (not just domain schema).

QUESTION 3

Your network contains an Active Directory forest named contoso.com.

The forest contains a single domain. The domain contains a server named Server1.

An administrator named Admin01 plans to configure Server1 as a standalone certification authority (CA).

You need to identify to which group Admin01 must be a member to configure Server1 as a standalone CA. The solution must use the principle of least privilege.

To which group should you add Admin01?

- A. Administrators on Server1.
- B. Domain Admins in contoso.com
- C. Cert Publishers on Server1
- D. Key Admins in contoso.com

Answer: A

QUESTION 4

You network contains an Active Directory domain named contoso.com. The domain contains 1,000 desktop computers and 500 laptops. An organizational unit (OU) named OU1 contains the computer accounts for the desktop computers and the laptops.

You create a Windows PowerShell script named Script1.ps1 that removes temporary files and cookies.

You create a Group Policy object (GPO) named GPO1 and link GPO1 to OU1.

You need to run the script once weekly only on the laptops.

What should you do?

- A. In GPO1, create a File preference that uses item-level targeting.
- B. In GPO1, create a Scheduled Tasks preference that uses item-level targeting.
- C. In GPO1, configure the File System security policy. Attach a WMI filter to GPO1.
- D. In GPO1, add Script1.ps1 as a startup script. Attach a WMI filter to GPO1.

Answer: B

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2.

Contoso.com has the following configuration:

```
PS C:\> (Get-ADForest).ForestMode
Windows2008R2Forest
PS C:\> (Get-ADDomain).DomainMode
Windows2008R2Domain
PS C:\>
```

You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration.

You need to configure Active Directory to support the planned deployment.

Solution: You upgrade a domain controller to Windows Server 2016.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Device Registration requires Windows Server 2012 R2 forest schema.

QUESTION 6

Drag and Drop Question

Your company has multiple offices.

The network contains an Active Directory domain named contoso.com. An Active Directory site exists for each office. All of the sites connect to each other by using DEFAULTIPSITELINK.

The company plans to open a new office.

The new office will have a domain controller and 100 client computers.

You install Windows Server 2016 on a member server in the new office.

The new server will become a domain controller.

You need to deploy the domain controller to the new office. The solution must ensure that the client computers in the new office will authenticate by using the local domain controller.

Which three actions should you perform next in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Create a new site object.	
Create a new connection object.	
Promote the member server to a domain controller.	
Create a new subnet object.	
Move the server object of the domain controller.	

Answer:

Actions	Answer Area
Create a new site object.	Create a new site object.
Create a new connection object.	Create a new subnet object.
Promote the member server to a domain controller.	Promote the member server to a domain controller.
Create a new subnet object.	
Move the server object of the domain controller.	

QUESTION 7

Your network contains an Active Directory domain named contoso.com.

You have an organizational unit (OU) named OU1 that contains the computer accounts of two servers and the user account of a user named User1.

A Group Policy object (GPO) named GPO1 is linked to OU1.

You have an application named App1 that installs by using an application installer named App1.exe.

You need to publish App1 to OU1 by using Group Policy.
What should you do?

- A. Create a Config.zap file and add a file to the File System node to the Computer Configuration node of GPO1.
- B. Create a Config.xml file and add a software installation package to the User Configuration node of GPO1.
- C. Create a Config.zap file and add a software installation package to the User Configuration node of GPO1.
- D. Create a Config.xml file and add a software installation package to the Computer Configuration node of GPO1.

Answer: C

QUESTION 8

You deploy a new enterprise certification authority (CA) named CA1.
You plan to issue certificates based on the User certificate template.
You need to ensure that the issued certificates are valid for two years and support autoenrollment.
What should you do first?

- A. Run the certutil.exe command and specify the resubmit parameter.
- B. Duplicate the User certificate template.
- C. Add a new certificate template for CA1 to issue.
- D. Modify the Request Handling settings for the CA.

Answer: B

Thank You for Trying Our Product

Braindump2go Certification Exam Features:

- ★ More than **99,900** Satisfied Customers Worldwide.
- ★ Average **99.9%** Success Rate.
- ★ **Free Update** to match latest and real exam scenarios.
- ★ **Instant Download** Access! No Setup required.
- ★ Questions & Answers are downloadable in **PDF** format and **VCE** test engine format.
- ★ Multi-Platform capabilities - **Windows, Laptop, Mac, Android, iPhone, iPod, iPad**.
- ★ **100%** Guaranteed Success or **100%** Money Back Guarantee.
- ★ **Fast**, helpful support **24x7**.
