Vendor: Microsoft

Exam Code: AZ-302

Exam Name: Microsoft Azure Solutions Architect
Certification Transition

Version: DEMO

QUESTION 1
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

You use ASP.NET Core MVC with ADO.NET lo develop an application. You implement database shard.ng for the application by using Azure SQL Database. You establish communication links between the shard databases.
You need to implement a strategy that allows a group of operations that are performed on multiple Azure databases to be rolled back on all databases if any of the operations fail.

Solution: Deploy a SQL database instance in an Azure Virtual Machine (VM).

- Establish linked servers to each Azure SQL Database instance from the SQL Server instance in the VM.
- Create a stored procedure in the VM that performs the update operations using a distributed transaction and commits them if successful.
- Run the SQL stored procedure on the SQL Server instance in the VM.

Does the solution meet the goal?

A. Yes
B. No

Answer: A

QUESTION 2
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions with not appear in the review screen.

You need to deploy resources to host a stateless web app in an Azure subscription The solution must meet the following requirements:

- Provide access to the full .NET framework.
- Provide redundancy it an Azure region fails.
- Grant administrators access to the operating system to install custom application dependencies.

Solution: You deploy an Azure virtual machine to two Azure regions, and you create a Traffic Manager profile.

Does this meet the goal?

A. Yes
B. No

Answer: A

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

You need to deploy resources to host a stateless web app in an Azure subscription. The solution must meet the following requirements:

- Provide access to the full .NET framework.
- Provide redundancy it an Azure legion fails.
- Grant administrators access to the operating system to install custom application dependencies.

Solution: You deploy a web app in an Isolated App Service plan.

Does this meet the goal?

A. Yes
B. No

Answer: A

QUESTION 4
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution After you answer a question in this section, you will NOT be able to return to it As a result these questions will not appear in the review screen.

You need to deploy resources to host a stateless web app in an Azure subscription. The solution must meet the requirements:

- Provide access to the full .Ni I framework.
- Provide redundancy if an Azure region fate
- Gram administrators access to the operating system to install custom application dependencies.

Solution: You deploy a virtual machine scale set that uses auto scaling.
Does this meet the goal?

A. Yes
B. No

Answer: B

QUESTION 5
You create a social media application that users can use to upload images and other content.
Users report that adult content is being posted in an area of the site that is accessible to and intended for young children.
You need to automatically detect and flag potentially offensive content. The solution must not require any custom coding other than code to scan and evaluate images.
What should you implement?

A. Bing Visual Search

B. Image Moderation
C. Custom Vision Search
D. Bing Web Search

Answer: A

QUESTION 6
You are creating an IoT solution using Azure Time Series Insights. You configure the environment to ensure that all data for the current year is available.
What should you do?

A. Set a value for the Data Retention time setting.
B. Change the pricing tier.
C. Ad a disaster recovery (DR) strategy.
D. Create a reference data set.

Answer: D
