

**Vendor:** Confluent

**Exam Code:** CCDAK

**Exam Name:** Confluent Certified Developer for Apache  
Kafka

**Version:** DEMO

#### QUESTION 1

If I want to send binary data through the REST proxy to topic "test\_binary", it needs to be base64 encoded. A consumer connecting directly into the Kafka topic

- A. "test\_binary" will receive
- B. binary data
- C. avro data
- D. json data
- E. base64 encoded data, it will need to decode it

**Answer: B**

**Explanation:**

On the producer side, after receiving base64 data, the REST Proxy will convert it into bytes and then send that bytes payload to Kafka. Therefore consumers reading directly from Kafka will receive binary data.

#### QUESTION 2

Which is an optional field in an Avro record?

- A. doc
- B. name
- C. namespace
- D. fields

**Answer: A**

#### QUESTION 3

A consumer application is using KafkaAvroDeserializer to deserialize Avro messages. What happens if message schema is not present in AvroDeserializer local cache?

- A. Throws SerializationException
- B. Fails silently
- C. Throws DeserializationException
- D. Fetches schema from Schema Registry

**Answer: D**

**Explanation:**

First local cache is checked for the message schema. In case of cache miss, schema is pulled from the schema registry. An exception will be thrown in the Schema Registry does not have the schema (which should never happen if you set it up properly)

#### QUESTION 4

Which of the following event processing application is stateless? (select two)

- A. Read events from a stream and modifies them from JSON to Avro
- B. Publish the top 10 stocks each day
- C. Read log messages from a stream and writes ERROR events into a high-priority stream and the rest of the events into a low-priority stream
- D. Find the minimum and maximum stock prices for each day of trading

**Answer:** AC

**Explanation:**

Stateless means processing of each message depends only on the message, so converting from JSON to Avro or filtering a stream are both stateless operations.

#### QUESTION 5

A consumer starts and has `auto.offset.reset=latest`, and the topic partition currently has data for offsets going from 45 to 2311. The consumer group has committed the offset 643 for the topic before. Where will the consumer read from?

- A. it will crash
- B. offset 2311
- C. offset 643
- D. offset 45

**Answer:** C

**Explanation:**

The offsets are already committed for this consumer group and topic partition, so the property `auto.offset.reset` is ignored.

#### QUESTION 6

A Zookeeper ensemble contains 3 servers. Over which ports the members of the ensemble should be able to communicate in default configuration? (select three)

- A. 2181
- B. 3888
- C. 443
- D. 2888
- E. 9092
- F. 80

**Answer:** ABD

**Explanation:**

2181 - client port, 2888 - peer port, 3888 - leader port

#### QUESTION 7

To get acknowledgement of writes to only the leader partition, we need to use the config...

- A. `acks=1`
- B. `acks=0`
- C. `acks=all`

**Answer:** A

**Explanation:**

Producers can set `acks=1` to get acknowledgement from partition leader only.

#### QUESTION 8

How will you find out all the partitions where one or more of the replicas for the partition are not in- sync with the leader?

- A. kafka-topics.sh --bootstrap-server localhost:9092 --describe --unavailable- partitions
- B. kafka-topics.sh --zookeeper localhost:2181 --describe --unavailable- partitions
- C. kafka-topics.sh --broker-list localhost:9092 --describe --under-replicated-partitions
- D. kafka-topics.sh --zookeeper localhost:2181 --describe --under-replicated-partitions

**Answer:** D

#### QUESTION 9

If a topic has a replication factor of 3...

- A. 3 replicas of the same data will live on 1 broker
- B. Each partition will live on 4 different brokers
- C. Each partition will live on 2 different brokers
- D. Each partition will live on 3 different brokers

**Answer:** D

**Explanation:**

Replicas are spread across available brokers, and each replica = one broker. RF 3 = 3 brokers

#### QUESTION 10

How do Kafka brokers ensure great performance between the producers and consumers? (select two)

- A. It compresses the messages as it writes to the disk
- B. It leverages zero-copy optimisations to send data straight from the page-cache
- C. It buffers the messages on disk, and sends messages from the disk reads
- D. It transforms the messages into a binary format
- E. It does not transform the messages

**Answer:** BE

**Explanation:**

Kafka transfers data with zero-copy and sends the raw bytes it receives from the producer straight to the consumer, leveraging the RAM available as page cache.

#### QUESTION 11

What isn't an internal Kafka Connect topic?

- A. connect-status
- B. connect-offsets
- C. connect-configs
- D. connect-jars

**Answer:** D

**Explanation:**

connect-configs stores configurations, connect-status helps to elect leaders for connect, and connect- offsets store source offsets for source connectors.

#### QUESTION 12

To enhance compression, I can increase the chances of batching by using

- A. acks=all
- B. linger.ms=20
- C. batch.size=65536
- D. max.message.size=10MB

**Answer:** B

**Explanation:**

linger.ms forces the producer to wait before sending messages, hence increasing the chance of creating batches that can be heavily compressed.

### QUESTION 13

There are 3 producers writing to a topic with 5 partitions. There are 5 consumers consuming from the topic. How many Controllers will be present in the cluster?

- A. 3
- B. 5
- C. 2
- D. 1

**Answer:** D

**Explanation:**

There is only one controller in a cluster at all times.

### QUESTION 14

The exactly once guarantee in the Kafka Streams is for which flow of data?

- A. Kafka => Kafka
- B. Kafka => External
- C. External => Kafka

**Answer:** A

**Explanation:**

Kafka Streams can only guarantee exactly once processing if you have a Kafka to Kafka topology.

### QUESTION 15

We would like to be in an at-most once consuming scenario. Which offset commit strategy would you recommend?

- A. Commit the offsets on disk, after processing the data
- B. Do not commit any offsets and read from beginning
- C. Commit the offsets in Kafka, after processing the data
- D. Commit the offsets in Kafka, before processing the data

**Answer:** D

**Explanation:**

Here, we must commit the offsets right after receiving a batch from a call to .poll()

#### QUESTION 16

A topic receives all the orders for the products that are available on a commerce site. Two applications want to process all the messages independently - order fulfilment and monitoring. The topic has 4 partitions, how would you organise the consumers for optimal performance and resource usage?

- A. Create 8 consumers in the same group with 4 consumers for each application
- B. Create two consumers groups for two applications with 8 consumers in each
- C. Create two consumer groups for two applications with 4 consumers in each
- D. Create four consumers in the same group, one for each partition - two for fulfilment and two for monitoring

**Answer: C**

**Explanation:**

two partitions groups - one for each application so that all messages are delivered to both the application. 4 consumers in each as there are 4 partitions of the topic, and you cannot have more consumers per groups than the number of partitions (otherwise they will be inactive and wasting resources).

#### QUESTION 17

Which of the following Kafka Streams operators are stateful? (select all that apply)

- A. flatmap
- B. reduce
- C. joining
- D. count
- E. peek
- F. aggregate

**Answer: BCDF**

#### QUESTION 18

A bank uses a Kafka cluster for credit card payments. What should be the value of the property `unclean.leader.election.enable`?

- A. FALSE
- B. TRUE

**Answer: A**

**Explanation:**

Setting `unclean.leader.election.enable` to true means we allow out-of-sync replicas to become leaders, we will lose messages when this occurs, effectively losing credit card payments and making our customers very angry.

#### QUESTION 19

A kafka topic has a replication factor of 3 and `min.insync.replicas` setting of 1. What is the maximum number of brokers that can be down so that a producer with `acks=all` can still produce to the topic?

- A. 3
- B. 0

- C. 2
- D. 1

**Answer: C**

**Explanation:**

Two brokers can go down, and one replica will still be able to receive and serve data.

#### QUESTION 20

I am producing Avro data on my Kafka cluster that is integrated with the Confluent Schema Registry. After a schema change that is incompatible, I know my data will be rejected. Which component will reject the data?

- A. The Confluent Schema Registry
- B. The Kafka Broker
- C. The Kafka Producer itself
- D. Zookeeper

**Answer: A**

**Explanation:**

The Confluent Schema Registry is your safeguard against incompatible schema changes and will be the component that ensures no breaking schema evolution will be possible. Kafka Brokers do not look at your payload and your payload schema, and therefore will not reject data.

#### QUESTION 21

How will you read all the messages from a topic in your KSQL query?

- A. KSQL reads from the beginning of a topic, by default.
- B. KSQL reads from the end of a topic. This cannot be changed.
- C. Use KSQL CLI to set `auto.offset.reset` property to `earliest`

**Answer: C**

**Explanation:**

Consumers can set `auto.offset.reset` property to `earliest` to start consuming from beginning. For KSQL, SET '`auto.offset.reset`'=`'earliest'`;

#### QUESTION 22

You want to sink data from a Kafka topic to S3 using Kafka Connect. There are 10 brokers in the cluster, the topic has 2 partitions with replication factor of 3. How many tasks will you configure for the S3 connector?

- A. 10
- B. 6
- C. 3
- D. 2

**Answer: D**

**Explanation:**

You cannot have more sink tasks (= consumers) than the number of partitions, so 2.

#### QUESTION 23

## Thank You for Trying Our Product

### Braindump2go Certification Exam Features:

- ★ More than **99,900** Satisfied Customers Worldwide.
- ★ Average **99.9%** Success Rate.
- ★ **Free Update** to match latest and real exam scenarios.
- ★ **Instant Download** Access! No Setup required.
- ★ Questions & Answers are downloadable in **PDF** format and **VCE** test engine format.
- ★ Multi-Platform capabilities - **Windows, Laptop, Mac, Android, iPhone, iPod, iPad**.
- ★ **100%** Guaranteed Success or **100%** Money Back Guarantee.
- ★ **Fast**, helpful support **24x7**.
