A. There is no service defined for the Salesforce application, so FortiGate will use the service rule 3 and steer the traffic through interface T_HQ1.
B. FortiGate steers traffic to HQ servers according to service rule 1 and it uses port1 or port2 because both interfaces are selected.
C. When FortiGate cannot recognize the application of the flow it steers the traffic destined to server 10.0.0.1 according to service rule 3.

D. FortiGate steers traffic for business application according to service rule 2 and steers traffic through port2.

Answer: AC

QUESTION 3
Which statement is correct about SD-WAN and ADVPN?

A. SD-WAN can steer traffic to ADVPN shortcuts only for rules defined with strategy manual or best quality.
B. SD-WAN does not monitor the health and performance of ADVPN shortcuts.
C. SD-WAN cannot steer traffic to ADVPN shortcuts established over IPSec overlays if the zone contains physical interfaces.
D. SD-WAN can steer traffic to ADVPN shortcuts established over IPsec overlays configured as SD-WAN members.

Answer: D

QUESTION 4
Which two statements about the SD-WAN members are true? (Choose two.)

A. Interfaces of type virtual wire pair can be used as SD-WAN members.
B. You can manually define the SD-WAN members sequence number.

Answer: A

QUESTION 6
The administrator uses the FortiManager SD-WAN overlay template to prepare an SD-WAN deployment. With information provided through the SD-WAN overlay template wizard, FortiManager creates templates ready to install on spoke and hub devices.

(Choose two.)

A. The interface T_INET_0 missed three SLA targets.
B. The interface T_INET_1 missed one SLA target.

Which configuration change is required if the responder FortiGate uses a dynamic routing
protocol to exchange routes over IPsec?

A. type must be set to static.
B. mode-cfg must be enabled.
C. exchange-interface-ip must be enabled.
D. add-route must be disabled.

Answer: D
Explanation:
For using "non ike" routes (for example BGP/static and so on) you must do disable the add-route
that inject automatically kernel route based on p2 selectors from the remote site.

QUESTION 11
Which CLI command do you use to perform real-time troubleshooting for ADVPN negotiation?
