

Vendor: Huawei

Exam Code: H13-811_V3.5

Exam Name: HCIA-Cloud Service V3.5

Version: DEMO

QUESTION 1

Which of the following parameters will not affect the cost calculation of the bare metal server BMS?

- A. Memory capacity
- B. Disk size
- C. CPU Specifications
- D. Number of network cards

Answer: D

QUESTION 2

Which of the following descriptions of content delivery network (CDN) services is wrong?

- A. CDN services must be resolved through public domain names, so you need to apply for a domain name before you can use CDN normally.
- B. CDN service can shorten the access delay of users to view content, improve the response speed of users accessing websites and the availability of websites.
- C. CDN service distributes the source site content to all CDN nodes by deploying node servers in various locations on the network, so that users can get the required content nearby.
- D. CDN service has the characteristics of simple access, rich and easy-to-use self-service configuration of the console, and open API interface.

Answer: A

QUESTION 3

Which of the following descriptions about the intelligent line resolution provided by Huawei Cloud is wrong?

- A. Intelligent line resolution function supports distinguishing the source and type of visitor IP by operator
- B. Intelligent line resolution function supports distinguishing the source and type of visitor IP by region
- C. Both public domain names and intranet domain names support the use of intelligent line resolution function
- D. Only public domain names support the use of intelligent line resolution function

Answer: C

QUESTION 4

Which of the following is not a management operation of the Elastic Load Balancing service ELB?

- A. Query elastic load balancing
- B. Enable elastic load balancing
- C. Delete elastic load balancing
- D. Listen to elastic load balancing

Answer: D

QUESTION 5

When purchasing services on the Huawei Cloud platform, billing issues are often involved. Huawei Cloud's billing models generally include on-demand billing, monthly/annual package, and competitive bidding. Which of the following descriptions of the billing model is correct?

- A. Pay-as-you-go is a post-payment model that charges based on the actual duration or amount of service used.
- B. Monthly/annual packages are post-paid models and are charged based on a fixed purchase cycle.
- C. Monthly/annual packages are suitable for scenarios where service resources can be activated or deleted at any time.
- D. Bidding is a prepaid model. Compared with on-demand billing, it can be charged according to actual usage time with a lower discount.

Answer: A

QUESTION 6

Which of the following descriptions about Huawei Cloud peer connection is wrong?

- A. Peering connections can be used to achieve intranet communication between different VPCs
- B. When configuring a peer connection, you need to configure routing information on the local VPC and the peer VPC.
- C. The prerequisite for creating a peer connection is that the local and remote subnets are the same.
- D. Peer-to-peer connections can be used across accounts

Answer: C

QUESTION 7

Which of the following services can be used by the elastic cloud server on Huawei Cloud to build a logically completely isolated network area?

- A. Elastic Scaling Service AS
- B. Virtual Private Cloud Service VPC
- C. Load Balancing Service ELB
- D. NAT Gateway Service

Answer: B

QUESTION 8

Which user with the following permissions can perform any operation on OBS resources?

- A. Tenant Administrator
- B. OBS Viewer
- C. Tenant Guest
- D. OBS Buckets Viewer

Answer: A

QUESTION 9

Which of the following descriptions about Elastic Cloud Server (ECS) is wrong?

- A. Provides multiple types of elastic cloud servers to meet different usage scenarios. Each type of elastic cloud server includes multiple specifications and supports specification changes.
- B. Supports purchasing cloud servers in annual/monthly, on-demand, and competitive bidding modes to meet different application scenarios
- C. Automatically adjust elastic computing resources according to business needs and strategies to efficiently match business requirements
- D. Based on the Dynaudio architecture, cloud servers have no virtualization overhead and performance loss, and 100% of computing resources are released

Answer: D

QUESTION 10

Engineer A deployed the Nginx service through containers and virtual machines respectively. Which of the following descriptions about the comparison between containers and virtual machines in this scenario is wrong?

- A. Containers are highly portable and easy to deploy
- B. Containers start faster than virtual machines
- C. Containers provide better isolation than virtual machines
- D. Containers are lighter than virtual machines

Answer: C

QUESTION 11

Which of the following descriptions about the relationship between bare metal servers and other services is wrong?

- A. You can mount a cloud disk to a bare metal server and expand the capacity of the cloud disk at any time.
- B. You can create a bare metal server through mirroring to improve the deployment efficiency of bare metal servers
- C. After applying for a bare metal server, install the Agent plug-in and complete the relevant configuration, and then you can view the monitoring data of the bare metal server in the cloud monitoring service
- D. You can customize the scaling configuration and scaling strategy to scale the bare metal server, saving resources and manpower operation and maintenance costs

Answer: D

QUESTION 12

A company's video website is deployed on Huawei Cloud. It purchased a public network domain name resolution service to provide services. During use, it was found that users who accessed the website through operator B complained that the website access speed was slow, while the speed of accessing the website through operators A and C was normal. Which of the following methods is the most effective to solve this problem?

- A. Create an intranet domain name to ensure faster access between cloud hosts
- B. Expand the bandwidth of existing IP to ensure sufficient bandwidth resources

- C. Add a new public network line of operator B and configure intelligent line resolution on Huawei Cloud
- D. Create reverse resolution to improve the reputation of the domain name

Answer: C

QUESTION 13

Which of the following is not one of the main functions of Web Application Firewall (WAF)?

- A. Prevent sensitive information leakage
- B. Website Anti-Crawler
- C. Web page tamper-proofing
- D. Brute force attack protection for elastic cloud servers

Answer: D

QUESTION 14

Which of the following descriptions about VPN gateway is wrong?

- A. VPN gateway can be used to establish secure and reliable encrypted communication between the virtual private cloud and the enterprise data center or other regional VPCs.
- B. The VPN gateway needs to correspond to the user's local gateway.
- C. VPN gateway is the entry gateway device established in the virtual private cloud.
- D. Each VPN gateway can correspond to multiple VPN connections.

Answer: C

QUESTION 15

Which of the following is not a specification type of Huawei Cloud Elastic Cloud Server ECS?

- A. Customized performance type
- B. Memory Optimized
- C. High Performance Computing
- D. High Performance Computing

Answer: A

QUESTION 16

An enterprise uses Huawei Cloud Elastic Cloud Server to carry business. Due to obvious peaks and troughs in business access, engineers hope to change the number of business instances in real time according to business conditions to ensure high resource utilization and low cost. The front end uses Huawei Cloud Elastic Load Balancing Service to implement front-end traffic forwarding. In order to improve the provisioning speed and ensure business reliability, which of the following operations is not recommended?

- A. Create a mirror image of the server that has installed your own software to facilitate subsequent distribution
- B. Use the elastic scaling service to create a scaling group based on the instance image and formulate a scaling strategy based on the business traffic

- C. Make a backup of the server that has installed your own software, and manually use the backup to create a new server to cope with peak traffic
- D. Add the servers in the elastic scaling group to the anti-affinity cloud server group to ensure business reliability

Answer: C

QUESTION 17

Which of the following descriptions about Huawei Cloud SFS capacity-based and SFS Turbo file storage types is wrong?

- A. At the same price, SFS capacity type has a larger capacity than SFS Turbo
- B. SFS capacity type has higher latency than SFS Turbo
- C. For the same capacity, SFS capacity type costs more than SFS Turbo
- D. SFS capacity type has higher bandwidth than SFS Turbo standard type

Answer: C

QUESTION 18

Which of the following descriptions about elastic scaling services is wrong?

- A. Auto-scaling supports health checks on instance status
- B. Auto-scaling can automatically adjust the number of instances in a scaling group according to the set policy
- C. Auto-scaling supports instance protection for specific instances in a scaling group
- D. Auto Scaling does not support viewing the instance status in a scaling group

Answer: D

QUESTION 19

Which of the following descriptions about Huawei Cloud is wrong?

- A. Huawei Cloud is divided into Huawei Cloud China and Huawei Cloud International
- B. A Huawei Cloud account can only log in to Huawei Cloud, and cannot log in to other Huawei services
- C. After the real-name authentication is completed, the relevant information cannot be changed
- D. Real-name authentication is divided into individual customer real-name authentication and corporate customer real-name authentication

Answer: B

QUESTION 20

In order for a user to remotely connect to an ECS running the Linux operating system via SSH, which of the following ports should be opened in the security group inbound direction?

- A. 53
- B. 80
- C. 22

D. 3389

Answer: C

QUESTION 21

Which of the following descriptions about the role of VLAN is wrong?

- A. Increase the interface bandwidth of the physical switch
- B. Enhance network security
- C. Improve the robustness of the network
- D. Isolate broadcast domains

Answer: A

QUESTION 22

When configuring the Elastic Load Balancing (ELB) service in Huawei Cloud, the allocation strategy used is the weighted round-robin algorithm. There are 2 ECSs in the backend server group, of which ECS-1 has a weight of 2 and ECS-2 has a weight of 1. There are currently 6 user requests forwarded to the backend server group. How many requests do ECS-1 and ECS-2 need to process respectively?

- A. ECS-1 processes 4, ECS-2 processes 2
- B. ECS-1 processed 6, ECS-2 processed 0
- C. ECS-1 processes 3, ECS-2 processes 3
- D. ECS-1 processes 2, ECS-2 processes 4

Answer: A

QUESTION 23

SFS can manage file system permissions through IAM. Which of the following is not a capacity-based policy type for SFS?

- A. SFS Administrator
- B. SFS WriteOnlyAccess
- C. SFS ReadOnlyAccess
- D. SFS FullAccess

Answer: B

QUESTION 24

Cloud computing can convert similar resources into resource pools and decompose resources into the smallest units. Which feature of cloud computing does this reflect?

- A. On-demand self-service
- B. Measurable services
- C. Resource pooling
- D. Extensive Internet access

Answer: C

QUESTION 25

Which of the following is not a storage category provided by Huawei Cloud Object Storage Service OBS?

- A. Archive Storage
- B. Low-frequency access storage
- C. Backup storage
- D. Standard storage

Answer: C

QUESTION 26

When e-commerce platforms encounter large-scale promotional activities such as "Double 11", "Double 12", and "618", the number of business visits increases rapidly in a short period of time, and only lasts for a few days or even hours. In this case, which two services do we usually use to save IT costs to the maximum extent while meeting business needs?

- A. Enable ELB and EIP services
- B. Enable ENAT and ELB services
- C. Enable CDN and AS services
- D. Enable ELB and AS services

Answer: D

QUESTION 27

Which of the following is not an advantage of NAS compared to SAN?

- A. NAS supports multiple protocols and operating systems
- B. Optimized for block data transfer
- C. NAS has an independent file system
- D. Optimized for file sharing

Answer: B

QUESTION 28

While using the object storage service, Huawei Cloud tenants can configure which of the following functions to receive notifications of object deletion?

- A. Lifecycle rules
- B. Anti-hotlinking
- C. Event Notification
- D. Static website hosting

Answer: C

Thank You for Trying Our Product

Braindump2go Certification Exam Features:

- ★ More than **99,900** Satisfied Customers Worldwide.
- ★ Average **99.9%** Success Rate.
- ★ **Free Update** to match latest and real exam scenarios.
- ★ **Instant Download** Access! No Setup required.
- ★ Questions & Answers are downloadable in **PDF** format and **VCE** test engine format.
- ★ Multi-Platform capabilities - **Windows, Laptop, Mac, Android, iPhone, iPod, iPad**.
- ★ **100%** Guaranteed Success or **100%** Money Back Guarantee.
- ★ **Fast**, helpful support **24x7**.
