- B. Backup Advisor
- C. Replication Manager
- D. RepliStor

**Answer: D**

**QUESTION 12**

A corporation recently acquired a secondary data center that is approximately 1,600 km from their primary data center location. The storage environment at the primary site consists of the following:

Windows and UNIX servers

CLARiiON storage system

10 TB of data to be replicated

T3 data link and 15-minute RPO

You are proposing a CLARiiON storage system for the secondary data center. Which EMC replication solution should you propose?

- A. MirrorView/A
- B. MirrorView/S
- C. RecoverPoint CRR
- D. RecoverPoint/SE

**Answer: C**

**QUESTION 13**

XYZ Corporation has recently acquired a secondary data center that is approximately 800 km

from its primary data center location. The storage environment at the primary site consists of the following:

Windows servers only

CLARiiON storage system

3 TB of data to be replicated

XYZ will purchase a CLARiiON system for the secondary data center, and they are looking for a scalable and cost-effective replication solution. Which EMC replication solution should you propose in this case?

#### QUESTION 14

Your customer has been using a CLARiiON CX4 array for several months and has asked you to help them design a data replication solution to their offsite facility approximately 250 km away. Their current network infrastructure can only provide them the equivalent of a T1 connection to the second facility, and they are asking for an RPO of no more than 20 minutes. They need to replicate roughly 1.75 TB of data with a change rate of less than 10%. The solution must interoperate with Windows and Linux hosts, and maximize the limited bandwidth available to the customer today. What replication solution would you suggest?

- A. MirrorView/A
- B. RecoverPoint CDP
- C. RecoverPoint/SE CRR
- D. SAN Copy

**Answer: C**

#### QUESTION 15

A customer has an existing production CX3-80 at their primary site and a CX3-20 at a remote site 2,000 km away. They have three dedicated DS3 and four T1 connections. They need to replicate their critical databases from the primary site to the remote site. The total size of the databases is over 5 TB. They are interested in a SAN-based method to move that much data. Their requirement is a RPO of seconds to minutes. They are currently negotiating a new WAN contract and are looking to reduce WAN bandwidth requirements. Which EMC solution do you recommend?
