

Vendor: Fortinet

Exam Code: FCSS_SASE_AD-25

Exam Name: FCSS - FortiSASE 25 Administrator

Version: DEMO

QUESTION 1

An administrator must restrict endpoints from certain countries from connecting to FortiSASE.

Which configuration can achieve this?

- A. Configure a network lockdown policy on the endpoint profiles.
- B. Configure a geography address object as the source for a deny policy.
- C. Configure geofencing to restrict access from the required countries.
- D. Configure source IP anchoring to restrict access from the specified countries.

Answer: C

Explanation:

Geofencing allows the administrator to restrict or allow access to FortiSASE services based on the geographic location of the endpoints, effectively blocking connections from specified countries.

QUESTION 2

What is the benefit of SD-WAN on-ramp deployment with FortiSASE?

- A. To provide access to private applications using the bookmark portal
- B. To provide device compliance checks using ZTNA tags
- C. To secure internet traffic for branch users
- D. To manage branch location endpoints

Answer: C

Explanation:

SD-WAN on-ramp with FortiSASE directs branch user internet traffic to the FortiSASE cloud for consistent security enforcement and protection, regardless of the branch location.

QUESTION 3

Which two settings are automatically pushed from FortiSASE to FortiClient in a new FortiSASE deployment with default settings? (Choose two.)

- A. zero trust network access (ZTNA) tags
- B. tunnel profile
- C. FortiSASE certificate authority (CA) certificate
- D. real-time protection

Answer: BC

Explanation:

In a default FortiSASE deployment, the tunnel profile (for secure connectivity) and the FortiSASE CA certificate (for SSL inspection and trusted communication) are automatically pushed to FortiClient endpoints.

QUESTION 4

Refer to the exhibits. Jumpbox and Windows-AD are endpoints from the same remote location. Jumpbox can access the internet through FortiSASE, while Windows-AD can no longer access the internet.

Based on the information in the exhibits, which reason explains the outage on Windows-AD?

Managed Endpoints

	Endpoint	ZTNA Tags (Detailed) 	Management Connection	Software OS	FortiClient Versi
☐	 Jumpbox	 FortiSASE-Compliant	 Online	 Microsoft Windows 11 Professional Edition, 64-bit (build 26100)	 7.2.8.1140
☐	 Windows-AD	 FortiSASE-Compliant  FortiSASE-Non-Compliant	 Online	 Microsoft Windows Server 2019 Datacenter Edition, 64-bit (build 17763)	 7.2.6.1076

ZTNA Tagging Rules

Name

Enabled ☒

When the following rules match

+ Create Edit Delete

☐	Type	Parameters	Matching Criteria
☒	Windows 1		
☐	OS Version	Windows 11 Windows Server 2019	At least one parameter must pass

Apply the following tag

Tag Name

Name

Enabled ☒

When the following rules match

+ Create Edit Delete

☐	Type	Parameters	Matching Criteria
☒	Windows 1		
☐	AntiVirus	NOT AV Software is installed and running	All parameters must pass

Apply the following tag

Tag Name

Secure Internet Access Policy

+ Create Edit Delete Search						
☐	Name	Profile Group	Source	Destination	Action	User
☒	System defined					
☒	Custom					
☐	Non-Compliant		FortiSASE-Non-Compliant	All Internet Traffic	Deny	All VPN Users
☐	Web Traffic	SIA	FortiSASE-Compliant	All Internet Traffic	Accept	Remote_SIA_Users

User Group: Remote_SIA_Users

Members: user1@fortinettraining.lab, user2@fortinettraining.lab

Edit

- A. Windows-AD is excluded from FortiSASE management.
- B. The FortiClient version installed on Windows AD does not match the expected version on FortiSASE.
- C. The device posture for Windows-AD has changed.
- D. The remote VPN user on Windows-AD no longer matches any VPN policy.

Answer: C

Explanation:

The Windows-AD endpoint now has both "FortiSASE-Compliant" and "FortiSASE-Non-Compliant" tags due to failing the antivirus software check. As a result, the Secure Internet Access Policy matches the "Non-Compliant" rule, which is set to Deny, causing the device to lose internet access.

QUESTION 5

Which description of the FortiSASE inline-CASB component is true?

- A. It has limited visibility when data is transmitted.
- B. It detects data in motion.
- C. It is placed outside the traffic path.
- D. It relies on API to integrate with cloud services.

Answer: B

Explanation:

FortiSASE inline-CASB operates in the traffic path to provide real-time visibility and control over data in motion as it is transmitted to and from cloud applications.

QUESTION 6

Which authentication method overrides any other previously configured user authentication on FortiSASE?

- A. MFA
- B. Local
- C. RADIUS
- D. SSO

Answer: D

Explanation:

Single Sign-On (SSO) overrides any other previously configured user authentication method on FortiSASE, taking precedence for user authentication.

QUESTION 7

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can determine the security posture of an endpoint.
- B. Zero-trust tags can be assigned to endpoint profiles based on user groups.
- C. Zero-trust tags can be used to allow or deny access to network resources.
- D. Zero-trust tags can help monitor endpoint system resource usage.

Answer: AC

Explanation:

Zero-trust tags assess endpoint compliance based on defined posture rules and are used in access policies to control whether a device is permitted or denied access to specific network resources.

QUESTION 8

Which FortiSASE feature ensures least-privileged user access to corporate applications that are protected by an on-premises FortiGate device?

- A. secure web gateway (SWG)
- B. zero trust network access (ZTNA)
- C. cloud access security broker (CASB)
- D. remote browser isolation (RBI)

Answer: B

Explanation:

ZTNA enforces least-privileged access by verifying user identity and device posture before granting access to specific corporate applications, even when protected by an on-premises FortiGate.

QUESTION 9

A company must provide access to a web server through FortiSASE secure private access for contractors.

What is the recommended method to provide access?

- A. Configure a TCP access proxy forwarding rule and push it to the contractor FortiClient endpoint.
- B. Update the DNS records on the endpoint to access private applications.
- C. Publish the web server URL on a bookmark portal and share it with contractors.
- D. Update the PAC file with the web server URL and share it with contractors.

Answer: C

Explanation:

The bookmark portal is the recommended method for providing contractors access to private web applications through FortiSASE Secure Private Access, as it offers a user-friendly, secure, and controlled access mechanism without requiring full network connectivity.

Thank You for Trying Our Product

Braindump2go Certification Exam Features:

- ★ More than **99,900** Satisfied Customers Worldwide.
- ★ Average **99.9%** Success Rate.
- ★ **Free Update** to match latest and real exam scenarios.
- ★ **Instant Download** Access! No Setup required.
- ★ Questions & Answers are downloadable in **PDF** format and **VCE** test engine format.
- ★ Multi-Platform capabilities - **Windows, Laptop, Mac, Android, iPhone, iPod, iPad**.
- ★ **100%** Guaranteed Success or **100%** Money Back Guarantee.
- ★ **Fast**, helpful support **24x7**.
