### **QUESTION 618**

A company has decided to use Windows thin clients for operations. Which of the following must be done to allow changes to the computers' OS and applications?

- A. A separate hardware token must be used to authenticate the user.
- B. The registry must be backed up to allow changes to the computer.
- C. The disk partition must be formatted as NTFS.
- D. The configuration must be unlocked.

**Answer:** C

### **QUESTION 619**

A development team is assigned to use Mac OS computers but will require the Windows OS for additional software testing. Which of the following would be the EASIEST and MOST effective way to run both operating systems at the same time?

- A. Connect via RDP to a Windows computer.
- B. Run a Type 1 hypervisor.
- C. Use Boot Camp.
- D. Subscribe to a VPS.

**Answer:** C

### **QUESTION 620**

A laptop is being upgraded. The machine currently has 4GB LPDDR3 soldered to the motherboard and one available RAM slot. Which of the following chips should be selected to upgrade the laptop?

- A. 2GB LPDDR3 SoDIMM
- B. 4GB LPDDR3 DIMM
- C. 8GB DDR4 SoDIMM
- D. 8GB LPDDR3 DIMM

**Answer:** A

### **QUESTION 621**

Which of the following peripherals would be the BEST option for a company that wants to be able to display a receipt and allow a customer to sign it?

- A. Touchpad
- B. Signature pad

<https://www.braindump2go.com/220-1001.html>

- C. Touch-screen monitor
- D. NFC reader

**Answer:** B

**QUESTION 622**

Which of the following wireless networking protocols will broadcast at 5GHz frequencies?

- A. 802.11ac
- B. 802.11b
- C. 802.11g
- D. 802.11q
- E. 802.11x

**Answer:** A

**QUESTION 623**

An inkjet printer shows a print-head quality problem. The user replaces the print head, and then the printer is online and indicates no errors. Users then report text documents print fine, but color charts are not correct. Which of the following should be checked FIRST?

- A. The color ink cartridges are from the printer manufacturer.
- B. The print quality is set to best.
- C. The print head alignment check passes.
- D. Print drivers are up to date.

**Answer:** C

**QUESTION 624**

Users of an older laser printer notice the printing on output is easily scratched off the paper. Which of the following is the MOST likely root cause?

- A. The paper in the trays has been exposed to moist air.
- B. The toner cartridge contains old toner.
- C. The corona wire is defective and needs to be replaced.
- D. The fuser assembly is not reaching the correct temperature.

**Answer:** D

**QUESTION 625**

A user reports a corporate computer, which was recently moved, can no longer print to the default printer. A technician verifies all the cables are connected, power cycles the printer, and restarts the PC but still cannot print to the default printer. The technician notices an identical printer in Devices and Printers that ends with (copy1). The (copy1) printer prints without issue. Which of the following MOST likely caused the issue when the computer was moved?

- A. The Microsoft XPS printer was set as the default printer after the PC came back up.
- B. The user did not shut down the computer correctly before moving it and unplugging the power.
- C. Updates loaded when the PC was shut down, which updated the printer drivers.
- D. The user moved the printer's USB cable to a different USB port on the desktop.

**Answer:** A

**QUESTION 626**

Several users reported an outage with a specific application. The help desk identified the problem and suspects the issue is with an on-premises server that was updated recently. The help desk is given authorization to roll back the

updates. Which of the following steps is the help desk about to perform?

- A. Documenting the findings, actions, and outcomes
- B. Testing the theory to determine cause to determine the next steps
- C. Verifying full system functionality after establishing a plan of action
- D. Implementing preventive measures after verifying system functionality

**Answer:** B

**QUESTION 627**

A computer freezes shortly after loading the operating system. A technician inspects the computer and obtains the following diagnostic information:

CPU: 3.4GHz 6 core

Vcore:	1.25V
Fan speed:	5000rpm
Temperature:	93C

GPU: PCIe

Memory:	4GB
GPU voltage:	1.093V
GPU temperature:	75C

Mainboard: ATX

RAM:	(4x) 8GB DDR4 2400
RAM frequency:	2133
Temperature:	38C
Secure boot:	On

Power supply: 750W

3.3V rail:	3.24V
------------	-------

Which of the following should the technician investigate further?

- A. The memory clock speed settings
- B. The integrity of the hard drive
- C. The CPU temperatures

- D. The power supply voltage
- E. The GPU temperatures

**Answer:** C

**QUESTION 628**

Which of the following cables can carry both a digital and an analog signal?

- A. DVI-I
- B. HDMI
- C. DisplayPort
- D. DVI-D

**Answer:** C

**QUESTION 629**

A thin client in a VDI environment receives the OS by connecting to the network through a number of devices. Which of the following is FIRST in the chain?

- A. NIC
- B. Router
- C. VLAN
- D. Switch

**Answer:** A

**QUESTION 630**

A user has connected a PC to a portable projector, but video does not appear on the screen when the user tests the projector. The user confirms the lens cap was removed from the projector. Which of the following should the user do NEXT?

- A. Adjust the keystone settings.
- B. Check the video cable.
- C. Verify the lamp works.
- D. Increase the brightness setting.

**Answer:** B

**QUESTION 631**

A user's computer shows a black screen when it is powered on, and it makes a fast, continuous beeping sound that does not stop until the computer is powered off. Which of the following does a technician MOST likely need to check?

- A. The keyboard
- B. The motherboard
- C. The processor fan
- D. The memory
- E. The BIOS

**Answer:** B

**QUESTION 632**

Which of the following should a technician verify before purchasing a PSU for use in a computer with a high-end graphics card?

- A. Wattage rating

- B. Input 12V
- C. Output 115V
- D. Efficiency rating

**Answer:** A

**QUESTION 633**

A potential customer of cloud servers needs the ability to ramp up computing resources quickly during traffic spikes. Which of the following features is MOST pertinent to providing this business need?

- A. Rapid elasticity
- B. Resource pooling
- C. Measured service
- D. On demand

**Answer:** A

**QUESTION 634**

A technician is gathering the requirements for a laptop that needs the smallest form factor and the fastest speeds possible for data storage. Which of the following, if used together, will BEST satisfy these requirements? (Select TWO).

- A. 2.5in form factor
- B. 3.5in form factor
- C. SATA
- D. NVMe
- E. M.2 form factor
- F. SCSI

**Answer:** DE

**QUESTION 635**

Which of the following devices would allow users to capture their health statistics while at the gym?

- A. Smart watch
- B. Tablet
- C. VR headset
- D. GPS

**Answer:** A

**QUESTION 636**

Ann, a user, calls the help desk to request a Windows 10 VM on her workstation to test a third-party application. Ann is concerned about system instability, since the application is resource intensive and requires a minimum of 8GB of RAM, two processor cores, and 250GB of HDD space. Ann's machine currently has 32GB of RAM, an eight-core processor, and a 2TB HDD. Which of the following BEST describes a system configuration that will ensure both VM and host system stability?

- A. Configure the VM with one processor core, 6GB of RAM, and 250GB of HDD space.
- B. Configure the VM with two processor cores, 8GB of RAM, and 250GB of HDD space.
- C. Configure the VM with three processor cores, 12GB of RAM, and 350GB of HDD space.
- D. Configure the VM with four processor cores, 16GB of RAM, and 500GB of HDD space.

**Answer:** D

**QUESTION 637**

A network technician is troubleshooting Internet connectivity issues on a customer's wired network. All PCs at the site are able to connect to local resources but not the Internet. The technician suspects the customer's router may have failed during a recent power outage. To verify this assumption, the technician should connect a laptop to:

- A. an AP's guest network.
- B. the network switch.
- C. a phone hotspot.
- D. the cable modem.

**Answer:** A

**QUESTION 638**

Which ~of the following connectors would be found on an ATX power supply?

- A. DB9
- B. Molex
- C. eSATA
- D. BNC

**Answer:** A

**QUESTION 639**

Which of the following cloud service models is hosted email an example of?

- A. Daas
- B. SaaS
- C. PaaS
- D. IaaS

**Answer:** A

**QUESTION 640**

user's computer will not boot, and the screen shows the following error: no 08 found. During the last week, the computer has been performing slower than normal, and the user has been experiencing a BSOD. Which of the following will MOST likely resolve the issue?

- A. Run the DiskPart command.
- B. Replace the hard drive
- C. Install more RAM.
- D. Upgrade to a faster CPU

**Answer:** B
