QUESTION 493

A user is having issues with website access. The user is trying to access a site that is used every day by everyone in the company. When the user goes to the site a message appears stating the site is not secure, and the address bar turns red. A technician confirms the site is working fine like everyone else. The technician verifies the address was entered correctly but when the message shows up. The address is different than what was typed. Which of the following is causing this issue?

- A. Rogue antivirus
- B. Browser redirection
- C. Invalid certificate
- D. Untrusted root CA

Answer: B

QUESTION 494

A technician is performing service on a computer and notices it is responding very slowly. The computer has 4GB of RAM, a four-core 3GHz processor, and a SATA 1TB 5400rpm 300GB HOD. The technician logs the following process information:

Name	CPU	Memory	Disk	Network
Explorer.exe	1%	160MB	1MBps	0kbps
System	5%	200MB	5MBps	5kbps
WSFTPD.exe	3%	140MB	3MBps	24190kbps
Trusted Installer	12%	560MB	75MBps	0kbps
chrome.exe	4%	1900MB	1MBps	253kbps
Win Defender	32%	120MB	2MBps	115kbps
dllhost.exe	0%	8MB	0.3MBps	0kbps

Based on this data, which of the following is the MOST likely cause of the performance issues?
