QUESTION 28

Refer to the exhibit. What is the result of implementing this configuration?

```
NEXUS (config)# feature tacacs+
NEXUS (config)# tacacs-server timeout 5
NEXUS (config)# tacacs-server directed-request
NEXUS (config)# tacacs-server deadtime 0
NEXUS (config)# tacacs server host 10.1.50.20 port 49
NEXUS (config)# tacacs-server host 10.1.50.20 key 7 "Flwhg123" timeout 1
NEXUS (config)# aaa group server tacacs+ ISE
NEXUS (config-tacacs+)# server 10.1.50.20
NEXUS (config-tacacs+)# deadtime 10
NEXUS (config-tacacs+)# use-vrf management
NEXUS (config-tacacs+)# source-interface mgmt 0
NEXUS (config)# aaa authentication login default group ISE
```

- A. The switch queries the TACACS+ server by using an encrypted text PAP login.
- B. The TACACS+ server uses the type-6 encrypted format.
- C. The switch queries the TACACS+ server by using a clear text PAP login.
- D. The timeout value on the TACACS+ server is 10 seconds.

Answer: D

QUESTION 29

Refer to the exhibit. Which setting must be configured to prevent the reuse of passwords?

>> All > User Management > User Services

Locales Roles Locally Authenticated Users Remotely Authenticated Users Sessions CIMS Sessions Banners Events FSM

Properties

Password Strength Check: ☒

Password Profile

Change Interval: History Count:
 No Change Interval: Change Count:
 Change During Interval: ☒ Enable ☐ Disable

Save Changes Reset Values

- A. Change Interval
- B. No Change Interval
- C. History Count
- D. Change Count

Answer: C

QUESTION 30

Drag and Drop Question

An engineer is implementing NetFlow on a Cisco Nexus 7000 Series Switch.

Drag and drop the NetFlow commands from the left into the correct order they must be entered on the right.

N7K-1(config)# interface <interface> N7K-1(config-if)# ip flow monitor NetflowMonitor input	Step 1
N7K-1(config)# feature netflow	Step 2
N7K-1(config)# flow exporter NetflowMonitor N7K-1(config)# flow record NetflowMonitor	Step 3
N7K-1(config)# flow monitor NetflowMonitor	Step 4

Answer:

N7K-1(config)# feature netflow
N7K-1(config)# flow exporter NetflowMonitor N7K-1(config)# flow record NetflowMonitor
N7K-1(config)# flow monitor NetflowMonitor
N7K-1(config)# interface <interface> N7K-1(config-if)# ip flow monitor NetflowMonitor input

Drag and Drop Question

An engineer deploys a custom guest shell rootfs onto multiple switches.
Drag and drop the steps from the left into the correct order on the right.
Export the Guest Shell rootfs.

Customize the guest shell rootfs.	Step 1
Export the Guest Shell rootfs.	Step 2
Store it in a file server.	Step 3
Import the Guest Shell rootfs to other switches.	Step 4
Install the specific Guest Shell across devices simultaneously.	Step 5

Answer:

Customize the guest shell rootfs.
Export the Guest Shell rootfs.
Store it in a file server.
Import the Guest Shell rootfs to other switches.
Install the specific Guest Shell across devices simultaneously.

QUESTION 32**Drag and Drop Question**

An engineer is configuring VNTag between a virtualized server and a Cisco Nexus 5500 Series switch.
Drag and drop the configuration steps from the left into the correct order on the right.

Time!

Configure support for VNTAG mode on the interface that connects to the server.	Step 1
Configure the vNICs of the server.	Step 2
Configure the server to support NIV mode.	Step 3
Enable the virtualization feature set.	Step 4
Configure the port profile.	Step 5
Install the virtualization feature set.	Step 6

Answer:

	Install the virtualization feature set.
	Enable the virtualization feature set.
	Configure the port profile.
	Configure support for VNTAG mode on the interface that connects to the server.
	Configure the vNICs of the server.
	Configure the server to support NIV mode.

Explanation:

QUESTION 33

Drag and Drop Question

Drag and drop the characteristics from the left onto the correct storage systems on the right.

expensive and complex to manage
moderately expensive and simple to configure
most resilient, highly scalable, and high-performance storage
appliance providing file system access
lacks scalability, performance, and advanced features

NAS
SAN

Answer:

NAS
lacks scalability, performance, and advanced features
moderately expensive and simple to configure
appliance providing file system access
SAN
expensive and complex to manage
most resilient, highly scalable, and high-performance storage

QUESTION 34

Drag and Drop Question

An engineer must recover configuration on a Cisco MDS 9000 Series switch from a previous version that was backed up to bootflash and then verify the restoration.

Drag and drop the commands on the left to the correct order on the right.

Time!

copy bootflash:<configuration_file> running-config	Step 1
copy running-config startup-config	Step 2
show startup-config	Step 3
write erase	Step 4
reload	Step 5

Answer:

	write erase
	reload
	copy bootflash:<configuration_file> running-config
	copy running-config startup-config
	show startup-config

QUESTION 35

Drag and Drop Question

A network engineer must implement RBAC on Cisco MDS 9000 Series Multilayer Switches.

Drag and drop the Cisco MDS 9000 Series roles from the left onto the correct categories on the right.

san-operator
global-admin
server-admin
storage-admin
network-admin
network-operator

System Defined

User Defined

Answer:

System Defined
network-admin
network-operator
server-admin

User Defined
san-operator
storage-admin
global-admin

Explanation:

https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/ucs-manager/GUI-User-Guides/Admin-Management/3-1/b_Cisco_UCS_Admin_Mgmt_Guide_3_1/b_UCSM_Admin_Mgmt_Guide_chapter_01.html

QUESTION 36

Drag and Drop Question

An engineer is implementing security on the Cisco MDS 9000 switch.

Drag and drop the descriptions from the left onto the correct security features on the right.

can be distributed via fabric services

uses the Exchange Fabric Membership Data protocol

allows a preconfigured set of Fibre Channel devices to logically connect to SAN ports

prevent unauthorized switches from joining the fabric or disrupting current fabric operations

Fabric Binding

Target 1

Target 2

Port Security

Target 3

Target 4

Answer:

Fabric Binding

uses the Exchange Fabric Membership Data protocol

allows a preconfigured set of Fibre Channel devices to logically connect to SAN ports

Port Security

can be distributed via fabric services

prevent unauthorized switches from joining the fabric or disrupting current fabric operations

QUESTION 37

Drag and Drop Question

Drag and drop the storage technologies from the left onto the correct descriptions on the right.

NFSv2	uses client machine authentication
Kerberos	uses users authentication
NFSv4	authenticates clients and servers in NFSv4
RADIUS	authenticates clients to corporate directory systems

Answer:

<input type="checkbox"/>	NFSv2
<input type="checkbox"/>	NFSv4
<input type="checkbox"/>	Kerberos
<input type="checkbox"/>	RADIUS

QUESTION 38

Overlay Transport Virtualization (OTV) provides an overlay that enables Layer 2 connectivity between separate Layer 2 domains, while keeping these domains independent and preserving the fault isolation, resiliency, and load-balancing benefits of an IP-based interconnection.

Which statements are true about OTV Adjacency Server? (Choose two.)

- A. Adjacency Server is required when OTV is deployed with unicast-only transport.
- B. Adjacency Server is required when OTV is deployed with multicast-enabled transport.
- C. Each OTV device wishing to join a specific OTV logical overlay needs to first register with the Adjacency Server.
- D. Each OTV device trying to join a specific OTV logical overlay needs to be configured as an Adjacency Server.

Answer: AC
