QUESTION 102

Your network contains an Active Domain Services (AD DS) forest. The forest contains three domains. Each domain contains 10 domain controllers. You plan to store a DNS zone in a custom active Directory partition. You need to create the Active Directory partition for the zone. The partition replicate to only four of the domain controllers. What should you use?

- A. Active Directory Sites and Services
- B. Active Directory Administrator Center
- C. dnscmd.exe
- D. DNS Manager

Answer: B

Section: (none)

QUESTION 103

Your network contains a Active Directory Domain Service (AD DS) forest named contoso.com. The forest root domain contains a server named server1. contoso.com. A two-way forest trust exists between the contoso.com forest and an AD DS forest named fabrikam.com. The fabrikam.com forest contains 10 child domains. You need to ensure that only the members of a group named fabrikam\Group1 can authenticate to server1.contoso.com. What should you do first?

- A. Change the trust to a one-way external trust.
- B. Add fabrikam\Group1 to the local Users group on server1.contoso.com.
- C. Enable SID filtering for the trust.
- D. Enable Selective authentication for the trust.

Answer: B

QUESTION 104

Your network contains a single-domain Active Directory Domain Services (AD DS) forest named conto.com. The forest contains the servers shown in the following exhibit table.

Name	Description
DC1	Domain controller
Server1	Member server

You plan to install a line-of-business (LOB) application on Server1. The application will install a custom windows services.

A new corporate security policy states that all custom Windows services must run under the context of a group

managed service account (gMSA). You deploy a root key.
You need to create, configure, and install the gMSA that will be used by the new application.
Which two actions should you perform? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. On Server1, run the install-ADServiceAccount cmdlet.
- B. On DC1, run the New-ADServiceAccount cmdlet.
- C. On DC1, run the Set_ADComputer cmdlet.
- D. ON DC1, run the Install-ADServiceAccount cmdlet.
- E. On Server1, run the Get-ADServiceAccount cmdlet.

Answer: AB

QUESTION 105

You have an Azure virtual machine named Server1 that runs a network management application.
Server1 has the following network configuration:

- Network interface: Nic1
- IP address 10.1.1.1/24
- Connected to: Vnet1/Subnet1

You need connect Server1 to an additional subnet named Vnet1/Subnet2.
What should you do?

- A. Create a private endpoint on Subnet2
- B. Add a network interface to server1.
- C. Modify the IP configurations of Nic1.
- D. Add an IP configuration to Nic1.

Answer: A

QUESTION 106

Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three domains. Each domain contains 10 domain controllers. You plan to store a DNS zone in a custom Active Directory partition.
You need to create the Active Directory partition for the zone. The partition must replicate to only four of the domain controllers.

What should you use?

- A. ntdsutil.exe
- B. Active Directory Sites and Services
- C. New-ADObject
- D. Active Directory Administrative Center

Answer: A

QUESTION 107

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. Group writeback is enabled in Azure AD Connect. The AD DS domain contains a server named Server1. Server 1 contains a shared folder named share1. You have an Azure Storage account named storage2 that uses Azure AD-based access control. The storage2 account contains a share named shared.

You need to create a security group that meets the following requirements:

- Can contain users from the AD DS domain
- Can be used to authorize user access to share 1 and share2

What should you do?

- A. in the AD DS domain, create a universal security group
- B. in the Azure AD tenant create a security group that has assigned membership
- C. in the Azure AD Tenant create a security group that has dynamic membership.

D. in the Azure AD tenant create a Microsoft 365 group

Answer: B

QUESTION 108

You have a server named Server1 that runs Windows Server.
 You plan to host applications in Windows containers.
 You need to configure Server1 to run containers.
 What should you install?

- A. Windows Admin Center
- B. the Windows Subsystem for Linux
- C. Docker
- D. Hyper-V

Answer: C

QUESTION 109

You have two servers that have the Hyper-V server role installed.
 The servers are joined to a failover cluster both servers can connect to the same disk on an iSCSI storage device.
 You plan to use the iSCSI storage to store highly available Hyper-V virtual machines that will support live migration functionality.
 You need to configure a storage resource in the failover cluster to store the virtual machines.
 What should you configure?

- A. a storage pool
- B. attributed File System (DFS) Replication
- C. a mirrored volume
- D. Cluster Shared volumes (CSV)

Answer: A

QUESTION 110

Hotspot Question

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Admin1 must use a password that has at least 14 characters.	<input type="radio"/>	<input type="radio"/>
User1 must use a password that has at least 10 characters.	<input type="radio"/>	<input type="radio"/>
If Admin1 creates a new local user on Server1, the password for the new user must be at least eight characters.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
Admin1 must use a password that has at least 14 characters.	<input type="radio"/>	<input checked="" type="radio"/>
User1 must use a password that has at least 10 characters.	<input checked="" type="radio"/>	<input type="radio"/>
If Admin1 creates a new local user on Server1, the password for the new user must be at least eight characters.	<input type="radio"/>	<input checked="" type="radio"/>

QUESTION 111

Hotspot Question

You have an onpremises DNS server named Server1 that runs Windows Server. Server 1 hosts a DNS zone named fabrikam.com.

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
Vnet1	Virtual network	Connects to the on-premises network by using a Site-to-Site VPN
VM1	Virtual machine	Runs Windows Server and has the DNS Server role installed
contoso.com	Private DNS zone	Linked to Vnet1
contoso.com	Public DNS zone	Contains the DNS records of all the platform as a service (PaaS) resources

What should you do? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

On Vnet1:

- Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
- Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.83.129.16.
- Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.83.129.16.

On the on-premises network:

- Configure forwarding for the contoso.com zone to VM1.
- Configure forwarding for the contoso.com zone to the public DNS zone.
- Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.83.129.16.

Answer:

Answer Area

On Vnet1:

- Configure VM1 to forward requests for the contoso.com zone to the public DNS zone.
- Configure Vnet1 to use a custom DNS server that is set to the Azure-provided DNS at 168.83.129.16.
- Configure VM1 to forward requests for the contoso.com zone to the Azure-provided DNS at 168.83.129.16.

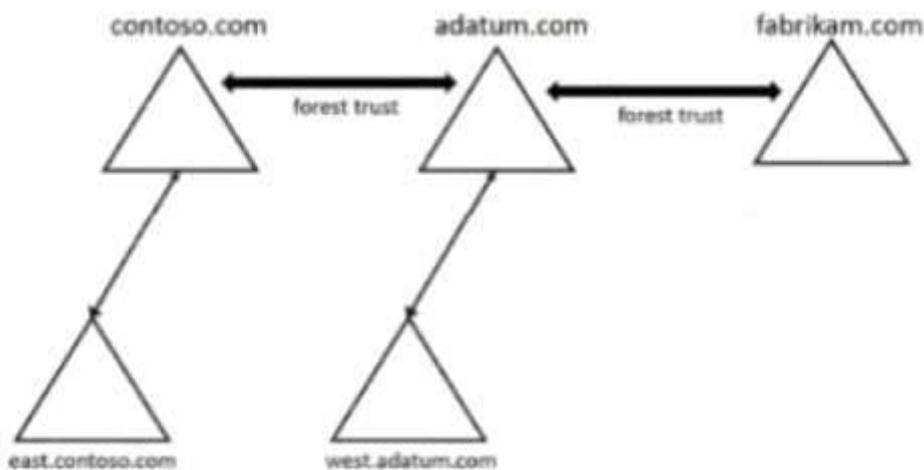

On the on-premises network:

- Configure forwarding for the contoso.com zone to VM1.
- Configure forwarding for the contoso.com zone to the public DNS zone.
- Configure forwarding for the contoso.com zone to the Azure-provided DNS at 168.83.129.16.

QUESTION 112

Hotspot Question

Your network contains three Active Directory Domain Services (AD DS) forest as shown in the following exhibit.

The network contains the users shown in the following table.

Name	Domain
User1	east.contoso.com
User2	fabrikam.com

The network contains the security groups shown in the following table.

Name	Type	Domain
Group1	Domain local	west.adatum.com
Group2	Universal	contoso.com
Group3	Universal	east.contoso.com

For each of the following statements, select Yes if the statement is true, Otherwise, select No.
 NOTE: Each correct selection is worth one point.

Answer Area

Statements

You can add User1 to Group1.

Yes

No

You can add User2 to Group3.

You can grant Group2 permissions to the resources in the fabrikam.com domain.

Answer:

Answer Area

Statements

You can add User1 to Group1.

Yes

No

You can add User2 to Group3.

You can grant Group2 permissions to the resources in the fabrikam.com domain.
