QUESTION 42

You have a Microsoft SharePoint Online site that contains several document libraries. One of the document libraries contains manufacturing reports saved as Microsoft Excel files. All the manufacturing reports have the same data structure.

You need to load only the manufacturing reports to a table for analysis.

What should you do in Microsoft Power BI Desktop?

- A. Get data from a SharePoint Online folder, enter the site URL, and then select **Combine & Load**.
- B. Get data from a SharePoint Online list and enter the site URL. Edit the query and filter by the path to the manufacturing reports library.
- C. Get data from a SharePoint Online folder and enter the site URL. Edit the query and filter by the path to the manufacturing reports library.
- D. Get data from a SharePoint Online list and enter the site URL.
Get data from a SharePoint Online list, enter the site URL, and then select **Combine & Load**.

Answer: C

Explanation:

Example:

My SharePoint site root url is <https://powerbipanama.sharepoint.com/>, but all of my files are actually in another site that starts with <https://powerbipanama.sharepoint.com/sites/externalsales/> URL.

In order to use the correct URL, we need to be in the folder of the data that we're trying to get and check the url that our browser shows. If it has the if it starts with the format of <https://<site address>/sites/<sitename>> then we need to use that url, otherwise we use the much simpler <https://<site address>>

In my own case, I'll be using the <https://powerbipanama.sharepoint.com/sites/externalsales> url in order to connect to my site.

<https://powerbi.microsoft.com/sv-se/blog/combining-excel-files-hosted-on-a-sharepoint-folder/>

QUESTION 43

You create the following step by using Power Query Editor. =

```
Table.ReplaceValue(SalesLT_Address,"1318","1319",Replacer.ReplaceText,{"AddressLine1"})
```

A row has a value of 21318 Lasalle Street in the AddressLine1 column.

What will the value be when the step is applied?

- A. 1318
- B. 1319
- C. 21318 Lasalle Street
- D. 21319 Lasalle Street

Answer: D

Explanation:

[DA-100 Exam Dumps](#) [DA-100 Exam Questions](#) [DA-100 PDF Dumps](#) [DA-100 VCE Dumps](#)

<https://www.braindump2go.com/da-100.html>

Example:

Replace the text "ur" with the text "or" in the table.

```
Table.ReplaceValue(
    Table.FromRecords({
        [a = 1, b = "hello"],
        [a = 3, b = "wurld"]
    }),
    "ur",
    "or",
    Replacer.ReplaceText,
    {"b"}
)
```

| a | b |
|---|-------|
| 1 | hello |
| 3 | world |

Reference:

<https://docs.microsoft.com/en-us/powerquery-m/table-replacevalue>

QUESTION 44

You import a large dataset to Power Query Editor.

You need to identify whether a column contains only unique values.

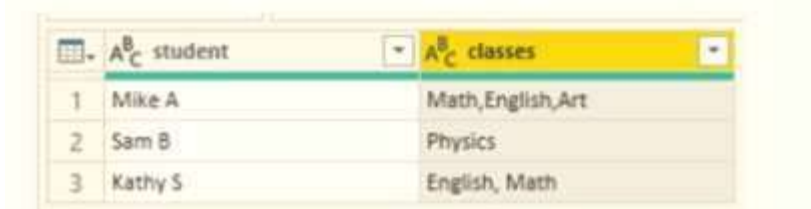

Which two Data Preview options can you use? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point

- A. Show whitespace
- B. Column distribution
- C. Column profile
- D. Column quality
- E. Monospaced

Answer: AD

QUESTION 45

You have a query that returns the data shown in the following exhibit.

| | student | classes |
|---|---------|------------------|
| 1 | Mike A | Math,English,Art |
| 2 | Sam B | Physics |
| 3 | Kathy S | English, Math |

You need to configure the query to display the data as shown in the following exhibit.

| | A ^B _C student | A ^B _C classes |
|---|-------------------------------------|-------------------------------------|
| 1 | Mike A | Math |
| 2 | Mike A | English |
| 3 | Mike A | Art |
| 4 | Sam B | Physics |
| 5 | Kathy S | English |
| 6 | Kathy S | Math |

Which step should you use in the query?

- A. =Table.ExpandListColumn(Table.TransformColumnins(Source, {"classes". Splitter.SplitTextByDelimiter(",", QuoteStyle.None), let itemType - (type nullable text) meta [Serialized.Text = true] in type {itemType}}), "classes")
- B. = Table.Unpivot(Source, {"classes"}, "Attribute", "Value")
- C. = Table.SplitColumn(Source, "classes". Splitter.SplitTextByDelimiterf",", QuoteStyle.None), {"classes.1"})
- D. = Table.SplitColumn(Source, "classes". Splitter.SplitTextByPositions({10}), {"classes.1"})

Answer: D

QUESTION 46

Hotspot Question

You are creating a column chart visualization.

You configure groups as shown in the Groups exhibit. {Click the Groups tab.)

Groups

| | | | |
|------------|--------------------|-----------|-------------|
| Name | Sepal.Width (bins) | Field | Sepal.Width |
| Group type | Bin | Min value | 2 |
| Bin Type | Number of bins | Max value | 4.4 |

Binning splits numeric or date/time data by an amount you specify. The default bin count is calculated based on your data.

| | | | |
|-----------|----|----------|----------------------|
| Bin count | 10 | Bin size | 0.240000000000000005 |
|-----------|----|----------|----------------------|

Reset to default

OK Cancel

The visualization appears as shown in the Chart exhibit. (Click the Chart tab.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
 NOTE: Each correct selection is worth one point.

| Answer Area | | Statements | Yes | No |
|-------------|--|--|-----------------------|-----------------------|
| | | The data is segmented into 10 groups. | <input type="radio"/> | <input type="radio"/> |
| | | The data was split into deciles. | <input type="radio"/> | <input type="radio"/> |
| | | To increase the bin size, you must decrease the bin count. | <input type="radio"/> | <input type="radio"/> |

Answer:

| Answer Area | | Statements | Yes | No |
|-------------|--|--|----------------------------------|----------------------------------|
| | | The data is segmented into 10 groups. | <input checked="" type="radio"/> | <input type="radio"/> |
| | | The data was split into deciles. | <input type="radio"/> | <input checked="" type="radio"/> |
| | | To increase the bin size, you must decrease the bin count. | <input checked="" type="radio"/> | <input type="radio"/> |

QUESTION 47

Hotspot Question

You need to create a visual as shown in the following exhibit.

| MonthName | Total Sales | Sales Last Year | % Growth to Last Year |
|--------------|----------------------|----------------------|-----------------------|
| January | £559,263.79 | £144,365.51 | 74.19% |
| February | £583,915.29 | £215,923.28 | 63.02% |
| March | £684,091.92 | £211,347.46 | 69.11% |
| April | £957,686.49 | £350,270.97 | 63.43% |
| May | £841,473.26 | £310,708.65 | 63.08% |
| June | £876,911.71 | £298,356.83 | 65.98% |
| July | £922,410.09 | £348,435.28 | 62.23% |
| August | £1,002,219.24 | £388,213.68 | 61.26% |
| September | £1,152,976.22 | £407,595.76 | 64.65% |
| October | £1,262,647.67 | £465,583.06 | 63.13% |
| November | £555,548.44 | £555,548.44 | 0.00% |
| December | £553,615.45 | £553,615.45 | 0.00% |
| Total | £9,952,759.56 | £4,249,964.36 | 57.30% |

The indicator color for Total Sales will be based on % Growth to Last Year.

The solution must use the existing calculations only.

How should you configure the visual? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 49

Hotspot Question

You are creating an analytics report that will consume data from the tables shown in the following table.

| Table name | Column name | Data type |
|------------|-----------------|--------------|
| Sales | sales_id | Integer |
| | sales_date | Datetime |
| | Customer_id | Integer |
| | sales_amount | Floating |
| | employee_id | Integer |
| | sales_ship_date | Datetime |
| | store_id | Varchar(100) |
| Employee | employee_id | Integer |
| | first_name | Varchar(100) |
| | last_name | Varchar(100) |
| | employee_photo | Binary |

There is a relationship between the tables.

There are no reporting requirements on employeejd and employee_photo.

You need to optimize the data model.

What should you configure for employeejd and employee.photo? To answer, select the appropriate options in the answer area.

Answer Area

Employee_id:

Employee_photo:

Answer:

Answer Area

Employee_id:

Employee_photo:

QUESTION 50

Hotspot Question

You are creating a Microsoft Power BI model that has two tables named CityData and Sales. CityData contains only the data shown in the following table.

| State (CityData) | City | Population (million) |
|------------------|---------------|----------------------|
| CA | Los Angeles | 4.00 |
| CA | San Francisco | 0.90 |
| New York | New York | 8.50 |
| WA | Seattle | 0.70 |
| WA | Spokane | 0.20 |

Sales contains only the data shown in the following table.

| State (Sales) | Type | Sales |
|---------------|----------|-------|
| CA | Internet | 60 |
| CA | Store | 80 |
| TX | Store | 400 |
| WA | Internet | 150 |
| WA | Store | 100 |

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
 NOTE: Each correct selection is worth one point.

Answer Area

| Statements | Yes | No |
|--|-----------------------|-----------------------|
| In the Sales table, you can write a DAX expression that uses the RELATED() function to get data from the CityData table. | <input type="radio"/> | <input type="radio"/> |
| A DAX expression of sales-total = CALCULATE(SUM(Sales[Sales]), ALL(Sales)) will produce the correct total sales value for each state, based on the data model. | <input type="radio"/> | <input type="radio"/> |
| A table visualization that uses CityData[State] and Sales[Sales] will contain sales from the state of TX. | <input type="radio"/> | <input type="radio"/> |

Answer:

Answer Area

| Statements | Yes | No |
|--|----------------------------------|----------------------------------|
| In the Sales table, you can write a DAX expression that uses the RELATED() function to get data from the CityData table. | <input checked="" type="radio"/> | <input type="radio"/> |
| A DAX expression of sales-total = CALCULATE(SUM(Sales[Sales]), ALL(Sales)) will produce the correct total sales value for each state, based on the data model. | <input checked="" type="radio"/> | <input type="radio"/> |
| A table visualization that uses CityData[State] and Sales[Sales] will contain sales from the state of TX. | <input type="radio"/> | <input checked="" type="radio"/> |

QUESTION 51

Drag and Drop Question

You build a report about warehouse inventory data. The dataset has more than 10 million product records from 200 warehouses worldwide.

You have a table named Products that contains the columns shown in the following table.

| Name | Sample data |
|----------------------|---|
| ProductDescription | Bikes > Adventure Works > Mountain Bikes > Super Carbon Bike > 26in wheels 42in frame |
| ProductCategory | Bikes |
| Manufacturer | Adventure Works |
| ProductSubcategory | Mountain Bikes |
| ProductSpecification | 26in wheels 42in frame |

Warehouse managers report that it is difficult to use the report because the report uses only the product name in tables and visuals. The product name is contained within the ProductDescription column and is always the fourth value.

You need to modify the report to support the warehouse managers requirement to explore inventory levels at different levels of the product hierarchy. The solution must minimize the model size.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

| Actions | Answer Area |
|--|-------------|
| Create a product hierarchy of Manufacturer, ProductSpecifications, ProductName, ProductSubcategory, and ProductCategory. | |
| Replace the use of ProductDescription in the report with the product hierarchy. | |
| Transform the ProductDescription column to contain only the text between the first and fourth > symbol. | |
| Add the product hierarchy as an extra field in visuals where ProductDescription is used. | |
| Add a column named ProductName that contains only the text between the third and fourth > symbol in the ProductDescription column. | |
| Add a column named ProductName that contains all the text after the third > symbol in the ProductDescription column. | |
| Create a product hierarchy of ProductCategory, ProductSubcategory, Manufacturer, ProductName, and ProductSpecifications. | |

Answer:

| Actions | Answer Area |
|--|--|
| Create a product hierarchy of Manufacturer, ProductSpecifications, ProductName, ProductSubcategory, and ProductCategory. | Add a column named ProductName that contains only the text between the third and fourth > symbol in the ProductDescription column. |
| Transform the ProductDescription column to contain only the text between the first and fourth > symbol. | Create a product hierarchy of ProductCategory, ProductSubcategory, Manufacturer, ProductName, and ProductSpecifications. |
| Add the product hierarchy as an extra field in visuals where ProductDescription is used. | Replace the use of ProductDescription in the report with the product hierarchy. |
| Add a column named ProductName that contains all the text after the third > symbol in the ProductDescription column. | |

QUESTION 52

Hotspot Question

You are creating a Microsoft Power BI imported data model to perform basket analysis. The goal of the analysis is to identify which products are usually bought together in the same transaction across and within sales territories. You import a fact table named Sales as shown in the exhibit. (Click the Exhibit tab.)

| Column name | Data type | Description |
|----------------------|-----------|--|
| SalesRowID | Integer | ID of the row from the source system, which represents a unique combination of SalesOrderNumber and SalesOrderLineNumber |
| ProductKey | Integer | Surrogate key that relates to the product dimension |
| OrderDateKey | Integer | Surrogate key that relates to the date dimension and is in the YYYYMMDD format |
| OrderDate | Datetime | Date and time an order was processed |
| CustomerKey | Integer | Surrogate key that relates to the customer dimension |
| SalesTerritoryKey | Integer | Surrogate key that relates to the sales territory dimension |
| SalesOrderNumber | Integer | Unique identifier of an order |
| SalesOrderLineNumber | Integer | Unique identifier of a line within an order |
| OrderQuantity | Integer | Quantity of the product ordered |
| LineTotal | Decimal | Total sales amount of a line before tax |
| TaxAmt | Decimal | Amount of tax charged for the items on a specified line within an order |
| Freight | Decimal | Amount of freight charged for the items on a specified line within an order |
| LastModified | Datetime | The date and time that a row was last modified in the source system |
| AuditID | Integer | The ID of the data load process that last updated a row |

The related dimension tables are imported into the model.

Sales contains the data shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements

| | Yes | No |
|---|-----------------------|-----------------------|
| The SalesRowID and AuditID columns can be removed from the model without impeding the analysis goals. | <input type="radio"/> | <input type="radio"/> |
| Both the OrderDateKey and OrderDate columns are necessary to perform the basket analysis. | <input type="radio"/> | <input type="radio"/> |
| The TaxAmt column must retain the current number of decimal places to perform the basket analysis. | <input type="radio"/> | <input type="radio"/> |

Answer:

Answer Area

Statements

| | Yes | No |
|---|----------------------------------|----------------------------------|
| The SalesRowID and AuditID columns can be removed from the model without impeding the analysis goals. | <input type="radio"/> | <input checked="" type="radio"/> |
| Both the OrderDateKey and OrderDate columns are necessary to perform the basket analysis. | <input checked="" type="radio"/> | <input type="radio"/> |

QUESTION 53

[DA-100 Exam Dumps](#) [DA-100 Exam Questions](#) [DA-100 PDF Dumps](#) [DA-100 VCE Dumps](#)

<https://www.braindump2go.com/da-100.html>

Drag and Drop Question

You have a Microsoft Power BI workspace.

You need to grant the user capabilities shown in the following table.

| User name | Task |
|-----------|--|
| User1 | Create and publish apps. |
| User2 | Publish reports to the workspace and delete dashboards |

The solution must use the principle of least privilege.

Which user role should you assign to each user? To answer, drag the appropriate roles to the correct users. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Roles

Answer Area

| | | |
|-------------------|------------------------|-----------------------------|
| <div>Admin</div> | <div>Contributor</div> | User1: <input type="text"/> |
| <div>Member</div> | <div>Viewer</div> | User2: <input type="text"/> |

Answer:

Roles

Answer Area

| | |
|-------------------|-------------------------------|
| <div>Admin</div> | User1: <div>Member</div> |
| <div>Viewer</div> | User2: <div>Contributor</div> |

Explanation:

Box 1: Member

| Capability | Admin | Member | Contributor | Viewer |
|--|-------|--------|-------------|-------------------------|
| Update and delete the workspace. | ✓ | | | |
| Add/remove people, including other admins. | ✓ | | | |
| Allow Contributors to update the app for the workspace | ✓ | | | |
| Add members or others with lower permissions. | ✓ | ✓ | | |
| Publish and change permissions for an app | ✓ | ✓ | | |
| Update an app. | ✓ | ✓ | | If allowed ¹ |

Incorrect Answers:

Contributors can update the app metadata but not publish a new app or change who has permission to the app.

Box 2: Contributor

| Capability | Admin | Member | Contributor | Viewer |
|--|-------|--------|-------------|--------|
| Create, edit, and delete content in the workspace. | ✓ | ✓ | ✓ | |
| Publish reports to the workspace, delete content. | ✓ | ✓ | ✓ | |

Reference:

<https://docs.microsoft.com/en-us/power-bi/collaborate-share/service-new-workspaces>

QUESTION 54

Hotspot Question

You have a report page that contains the visuals shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

Answer Area

Selecting a quarter on the line chart will **[answer choice]** the clustered column chart.

▼

☐ cross-filter
 ☐ cross-highlight
 ☐ not affect

Selecting a data point on the Tailspin Toys line on the line chart will **[answer choice]** the map.

▼

☐ cross-filter
 ☐ cross-highlight
 ☐ not affect

Answer:

Answer Area

Selecting a quarter on the line chart will [answer choice] the clustered column chart.

| |
|-----------------|
| ▼ |
| cross-filter |
| cross-highlight |
| not affect |

Selecting a data point on the Tailspin Toys line on the line chart will [answer choice] the map.

| |
|-----------------|
| ▼ |
| cross-filter |
| cross-highlight |
| not affect |

QUESTION 55

Hotspot Question

You have two Azure SQL databases that contain the same tables and columns. For each database, you create a query that retrieves data from a table named Customers.

You need to combine the Customer tables into a single table. The solution must minimize the size of the data model and support scheduled refresh in powerbi.com.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Option to use to combine the Customer tables:

| |
|-----------------------|
| Append Queries |
| Append Queries as New |
| Merge Queries |
| Merge Queries as New |

Action to perform on the original two SQL database queries:

| |
|--|
| Delete the queries. |
| Disable including the query in report refresh. |
| Disable loading the query to the data model. |
| Duplicate the queries. |

Answer:

Answer Area

Option to use to combine the Customer tables:

| |
|-----------------------|
| Append Queries |
| Append Queries as New |
| Merge Queries |
| Merge Queries as New |

Action to perform on the original two SQL database queries:

| |
|--|
| Delete the queries. |
| Disable including the query in report refresh. |
| Disable loading the query to the data model. |
| Duplicate the queries. |

QUESTION 56

Hotspot Question

You have a folder of monthly transaction extracts.

You plan to create a report to analyze the transaction data.

You receive the following email message: "Hi. I've put 24 files of monthly transaction data onto the shared drive. File Transactions201901.csv through Transactions201912.csv have the latest set of columns, but files Transactions201801.csv to Transactions201812.csv have an older layout without the extra fields needed for analysis. Each file contains 10 to 50 transactions."

You get data from the folder and select Combine & Load. The Combine Files dialog box is shown in the exhibit. (Click the Exhibit tab.)

Combine Files

Specify the settings for each file. [Learn more](#)

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

| Actions | | Answer Area |
|---|---|-------------|
| Select Use Headers as First Row . | <div style="display: flex; align-items: center; justify-content: center;"> <div style="border: 1px solid black; border-radius: 50%; width: 20px; height: 20px; margin-right: 5px;"></div> <div style="border: 1px solid black; border-radius: 50%; width: 20px; height: 20px; margin-right: 5px;"></div> </div> | |
| Select Department and Product and Unpivot Other Columns . | | |
| Select Use First Rows as Headers . | | |
| Rename the third column as Year and the fourth column as Revenue. | | |
| Select Department and Product and Unpivot Columns . | | |
| Rename the third column as Revenue and the fourth column as Year. | | |

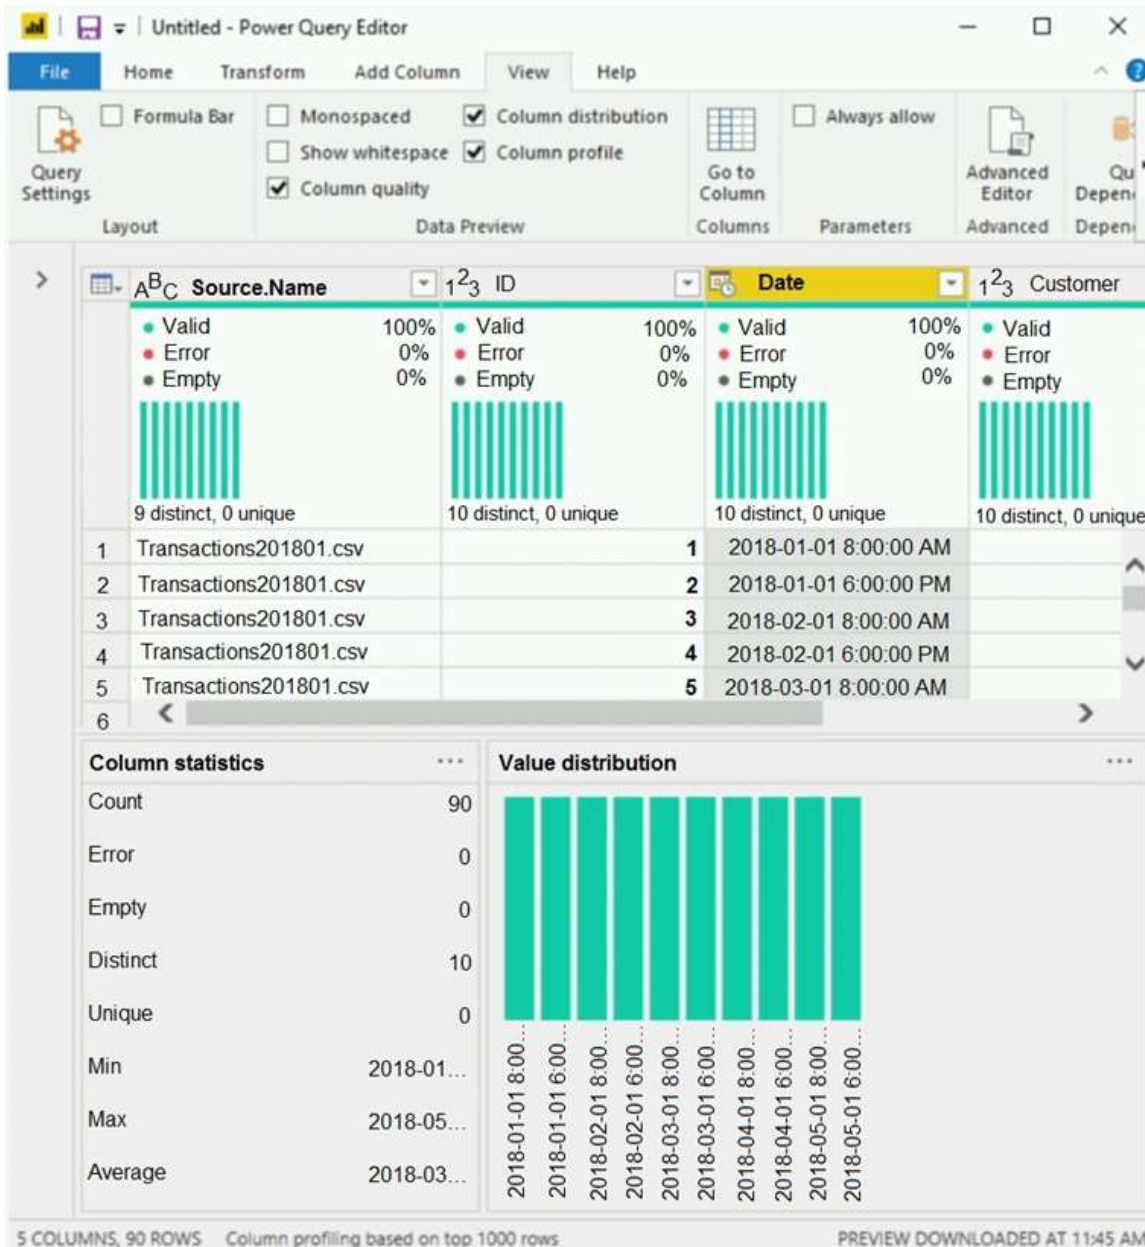

Answer:

| Actions | | Answer Area |
|--|---|---|
| Select Use Headers as First Row . | <div style="display: flex; align-items: center; justify-content: center;"> <div style="border: 1px solid black; border-radius: 50%; width: 20px; height: 20px; margin-right: 5px;"></div> <div style="border: 1px solid black; border-radius: 50%; width: 20px; height: 20px; margin-right: 5px;"></div> </div> | Select Use First Rows as Headers . |
| Select Department and Product and Unpivot Other Columns . | | Rename the third column as Year and the fourth column as Revenue. |
| | | Select Department and Product and Unpivot Columns . |
| | | Rename the third column as Revenue and the fourth column as Year. |

QUESTION 58

Hotspot Question

You view a query named Transactions as shown in the following exhibit.

The query gets CSV files from a folder.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer Area

There are [answer choice] CSV files:

| | |
|-------|---|
| | ▼ |
| 9 | |
| 10 | |
| 25 | |
| 90 | |
| 1,000 | |

Removing duplicates based on the Date column
will reduce the dataset to [answer choice] rows:

| | |
|-------|---|
| | ▼ |
| 9 | |
| 10 | |
| 25 | |
| 90 | |
| 1,000 | |

Answer:

Answer Area

There are [answer choice] CSV files:

| | |
|-------|---|
| | ▼ |
| 9 | |
| 10 | |
| 25 | |
| 90 | |
| 1,000 | |

Removing duplicates based on the Date column
will reduce the dataset to [answer choice] rows:

| | |
|-------|---|
| | ▼ |
| 9 | |
| 10 | |
| 25 | |
| 90 | |
| 1,000 | |

Explanation:

Box 1: 9

9 distinct CSV files.

Box 2: 10

10 distinct dates.

QUESTION 59

Drag and Drop Question

You are modeling data in table named SalesDetail by using Microsoft Power BI.

You need to provide end users with access to the summary statistics about the SalesDetail data.

[DA-100 Exam Dumps](#) [DA-100 Exam Questions](#) [DA-100 PDF Dumps](#) [DA-100 VCE Dumps](#)

<https://www.braindump2go.com/da-100.html>

The users require insights on the completeness of the data and the value distributions.
 Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

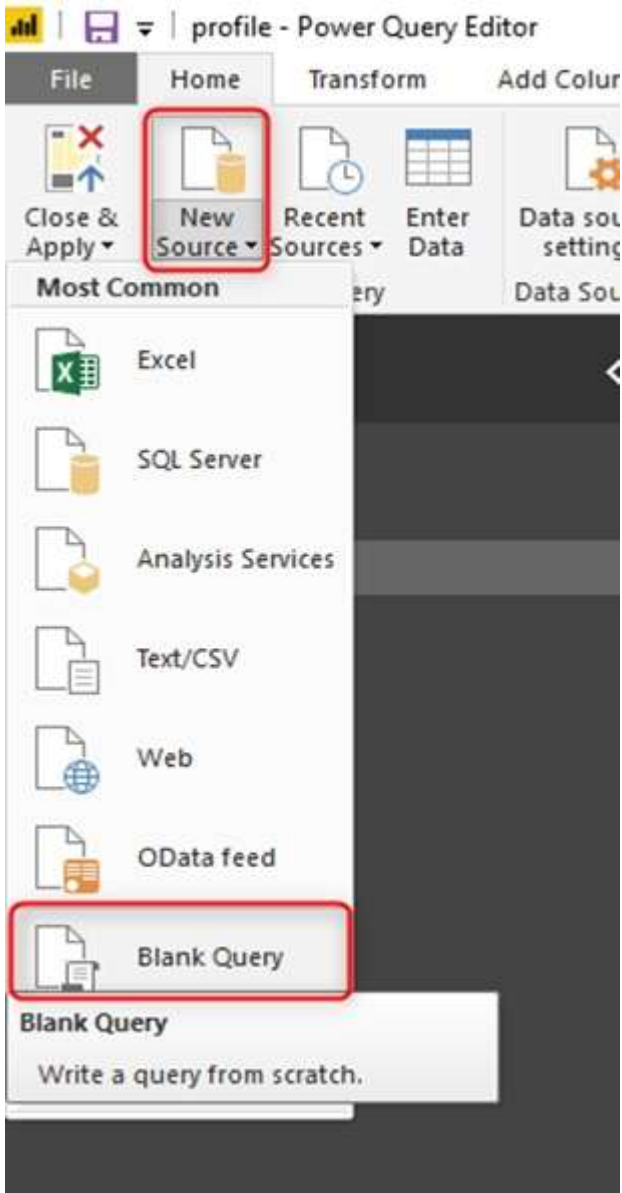

| Actions | | Answer Area |
|--|---|-------------|
| Specify the following query, then close and apply. -Table.Distinct(\$"SalesDetail") | | |
| Create a visual for the query table. | | |
| Create a parameter that uses a query for the suggested values. | ⬅ | ⬆ |
| Create a query that uses Common Data Service as a data source. | ➡ | ⬇ |
| Specify the following query, then close and apply. -Table.Profile(\$"SalesDetail") | | |
| Create a blank query as a data source. | | |

Answer:

| Actions | | Answer Area |
|--|---|---|
| Specify the following query, then close and apply. -Table.Distinct(\$"SalesDetail") | | Create a blank query as a data source. |
| | | Specify the following query, then close and apply. -Table.Profile(\$"SalesDetail") |
| Create a parameter that uses a query for the suggested values. | ⬅ | Create a visual for the query table. |
| Create a query that uses Common Data Service as a data source. | ➡ | |

Explanation:

Step 1: Create a blank query as a data source
 Start with a New Source in Power Query Editor, and then Blank Query.

Create a parameter that use a query for suggested values.

Step 2: Specify the following query, then close and apply. -Table.Profile("#SalesDetail")

In the new blank query, in the formula bar (if you don't see the formula bar, check the formula bar option in the View tab of the Power Query Editor), type below expression:

=Table.Profile()

Note that this code is not complete yet, we need to provide a table as the input of this function.

Note: The Table.Profile() function takes a value of type table and returns a table that displays, for each column in the original table, the minimum, maximum, average, standard deviation, count of values, count of null values and count of distinct values.

Step 3: Create a visual for the query table.

The profiling data that you get from Table.Profile function is like below;

After loading the data into Power BI, you'll have the table with all columns, and it can be used in any visuals.

QUESTION 60

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a query for a table named Sales. Sales has a column named CustomerID. The Data Type of CustomerID is Whole Number.

You refresh the data and find several errors. You discover that new entries in the Sales table contain nonnumeric values.

You need to ensure that nonnumeric values in the CustomerID column are set to 0.

Solution: From Query Editor, select the CustomerID column. Click Replace Errors... and enter a value of.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

QUESTION 61

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a query for a table named Sales. Sales has a column named CustomerID. The Data Type of CustomerID is Whole Number.

You refresh the data and find several errors. You discover that new entries in the Sales table contain nonnumeric values.

You need to ensure that nonnumeric values in the CustomerID column are set to 0.

Solution: From Query Editor, open Advanced Editor and add the following query step.

<https://www.braindump2go.com/da-100.html>

```
#"Replaced Errors"=Table.ReplaceErrorValues(#"Changed Type",{{"CustomerID",0}})
```

Does this meet the goal?

- A. Yes
- B. No

Answer: B

QUESTION 62

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a query for a table named Sales. Sales has a column named CustomerID. The Data Type of CustomerID is Whole Number.

You refresh the data and find several errors. You discover that new entries in the Sales table contain nonnumeric values.

You need to ensure that nonnumeric values in the CustomerID column are set to 0.

Solution: From Query Editor, select the CustomerID column and click Remove Errors.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

QUESTION 63

You have a Power BI model for sales data. You create a measure to calculate the year-to-date sales.

You need to compare the year-to-date sales with the previous year for the same time period.

Which DAX function should you use?

- A. LASTDATE
- B. TOTALYTD
- C. SAMEPERIODLASTYEAR
- D. PREVIOUSYEAR

Answer: C

QUESTION 64

From the Home tab in Power BI Desktop, you click **Enter Data** and create a table named Sales that contains the following data.

| Region | Sales |
|--------|-------|
| Canada | 100 |
| Canada | 900 |
| Italy | 500 |
| Spain | 800 |
| US | 200 |
| US | 1000 |

You add Region and Sales to visualization and the visualization displays the following data.

| Sales | Region |
|-------|--------|
| 1000 | Canada |
| 500 | Italy |
| 800 | Spain |
| 1200 | US |

What causes the visualization to display four rows of data instead of six?

- A. the Data Category of Region
- B. the Default Summarization on Region
- C. the Default Summarization on Sales
- D. the Data Category of Sales

Answer: B

QUESTION 65

You have a table named Sales. A sample of the data in Sales is shown in the following table.

| SalesOrderID (WholeNumber) | ProductName (Text) | OrderQty (Whole Number) | OrderDate (Date) | UnitPrice (Decimal Number) | TotalPrice (Decimal Number) |
|-------------------------------|-----------------------|-------------------------------|---------------------|----------------------------------|-----------------------------------|
| 71774 | Bike | 1 | May 1, 2017 | 356.898 | 356.898 |
| 71774 | Car | 1 | May 1, 2017 | 356.898 | 356.898 |
| 71775 | Train | 1 | May 2, 2017 | 1430.442 | 1430.442 |
| 71775 | Puzzle | 3 | May 2, 2017 | 63.9 | 191.7 |
| 71775 | Skateboard | 4 | May 3, 2017 | 32.394 | 129.576 |
| 71776 | Doll | 1 | May 4, 2017 | 63.9 | 63.9 |

You create a stacked column chart visualization that displays ProductName by Date.

You discover that the axis for the visualization displays all the individual dates. You need to ensure that the visualization displays ProductName by year and that you can drill down to see ProductName by week and day. What should you do first?

- A. Create a new table that has columns for the date, year, week, and day.
- B. Create a new hierarchy in the Sales table.
- C. Format the visualization and set the type of the X-Axis to Categorical.
- D. Configure a visual filter for the Date column that uses an advanced filter.

Answer: A

Explanation:

You need to display it by WEEK, which is not auto-done. So A is the first thing to do.
