Explanation:

A mandatory user profile is a roaming user profile that has been pre-configured by an administrator to specify settings for users. Settings commonly defined in a mandatory profile include (but are not limited to): icons that appear on the desktop, desktop backgrounds, user preferences in Control Panel, printer selections, and more. Configuration changes made during a user's session that are normally saved to a roaming user profile are not saved when a mandatory user profile is assigned. The .man extension causes the user profile to be a read-only profile.
