QUESTION 1082
A network administrator has been experiencing slow performance and file errors when attempting to utilize server utilities. The administrator needs to ensure the system files on the server have not been modified. Which of the following should be used to ensure the server files have not been compromised?

A. Performance baseline
B. File hash
C. Iptables
D. tcpdump

Answer: B

QUESTION 1083
A network technician is helping to install 50 Cat6a drops from users' computers into an IDF. Which of the following is the termination point at the IDF?

A. A breakout box
B. A 66 block
C. A 110 block
D. A patch panel

Answer: C

QUESTION 1084
Which of the following would MOST likely provide continuous power during a short brownout?

A. Uninterruptible power supply
B. Hot site
C. Cold site
D. Generator
E. Redundant power supplies

Answer: A

QUESTION 1085
A network analyzer captures traffic from a host that is sending 802.1q traffic to a Layer 3 switch. Which of the following attacks is occurring?

A. MITM

B. VLAN hopping
C. ARP poisoning
D. Spoofing

Answer: B

QUESTION 1086
A network administrator needs to install a new 6U switch in the third-floor IDF. Which of the following should the administrator consult to make sure space is available?

A. Network baseline documentation
B. Rack diagram
C. Inventory management documentation
D. Logical diagram

Answer: B

QUESTION 1087
A network technician needs to install new network cables. The technician will be running the cables in the air return space above the drop ceiling. Which of the following cable types should be installed?

A. Plenum
B. Coaxial
C. Shielded twisted pair
D. Fiber optic

Answer: A

QUESTION 1088
Which of the following can be used to provide connectivity to a network storage server without the need for dedicated switches and cabling? (Choose two.)

A. Fibre Channel
B. FCoE
C. InfiniBand
D. iSCSI
E. SATA

Answer: BD

QUESTION 1089
A network administrator is creating a new WLAN that should only be used by legacy devices that do not support a secure method of authentication. Which of the following should be configured to provide connectivity and minimal security to the new network? (Choose two.)

A. Pre-shared key
B. Open authentication
C. PEAP
D. MAC filtering
E. EAP-FAST
F. EAP-TLS

Answer: AD

QUESTION 1090

A new employee is unable to access any network resources. All other users are able to access the network at 100Mbps. No IP address, subnet mask, or default gateway is displayed on the new employee's workstation. The network administrator reterminates all connectors using the correct standard. Upon further investigation, the network administrator also notices the following:

Wire map results from the user patch cable to the patch cable connecting to the switch:

- Pins 5 and 7 are short.
- The distance is 200ft (61m).

Additional observations on the switch:

- The VLAN is set correctly.
- The port is not disabled.
- The duplex/speed settings are correct.
- Port LEDs are off for that port.
- The port is set to untagged.

Which of the following is the MOST likely reason the new employee is having network issues?

A. Bad switchport
B. Incorrect pinout
C. Open/short
D. VLAN mismatch
E. Distance limitation

Answer: A

QUESTION 1091
Which of the following would MOST likely contain information about credential reuse?

A. Acceptable use policy
B. Password policy
C. Non-disclosure agreement
D. Remote access policy

Answer: B

QUESTION 1092
An ARP request is broadcasted and sends the following request:
"Who is 192.168.1.200? Tell 192.168.1.55"
At which of the following layers of the OSI model does this request operate?

A. Application
B. Data link
C. Transport
D. Network
E. Session

Answer: B

QUESTION 1093
A network technician needs to replace a failed hard drive on a server at the company's large, remote datacenter. Which of the following types of documentation should be reviewed to locate this server easily?

A. Logical diagrams
B. Rack diagrams
C. Change management
D. Standard operating procedures

Answer: B
