Question: 61

A customer's infrastructure consists of multiple ONTAP clusters, both physical and virtual. The clusters replicate some data with each other. You want to generate a comprehensive report of all the replication that is present on the infrastructure.

In this scenario, which tool accomplishes this task?

- A. OnCommand System Manager
- B. Storage Replication Adapter
- C. OnCommand Unified Manager
- D. OnCommand Workflow Automation

Answer: A

Explanation:

Question: 62

You have set up a SnapMirror relationship between two SVMs for data protection. The data in the source volume is unavailable due to an event related to a virus infection leading to data corruption.

In this scenario, which three actions are required to activate the SnapMirror destination volume and provide data access to the users? (Choose three.)

Question: 64

You are deploying a mission-critical business application for a healthcare customer that, according to government policies and regulations, requires zero data loss.

In this scenario, which NetApp solution enables you to set up data replication at a volume level to satisfy your business needs?

- A. MetroCluster
- B. SnapMirror-Synchronous
- C. Snapshot Copies
- D. SyncMirror

Answer: B

Explanation:

Question: 65

A customer is using SnapMirror to replicate their data to a remote site. They notice that storage efficiency is not preserved, and the amount of data at the destination is higher than expected.

In this scenario, which configuration in the destination volume would cause this issue?

- A. Post process deduplication is enabled on the destination.
- B. The volumes are not thin-provisioned on the destination.
- C. Post process compression is enabled on the destination.
- D. There is an existing FlexClone volume on the destination.

Answer: D

Explanation:

Question: 66

You have deployed volume-level replication with NetApp Synchronous SnapMirror replication technology.

In this scenario, which two statements are true? (Choose two.)
