Within an Anti-Spyware security profile, which tab is used to enable machine learning based engines?

- A. Signature Policies
- B. Signature Exceptions
- C. Machine Learning Policies
- D. Inline Cloud Analysis

Answer: D

QUESTION 388

Which two statements correctly describe how pre-rules and local device rules are viewed and modified? (Choose two.)

- A. Pre-rules can be modified by the local administrator or by a Panorama administrator who has switched to a local firewall.

- B. Pre-rules and local device rules can be modified in Panorama.
- C. Pre-rules can be viewed on managed firewalls.
- D. Pre-rules are modified in Panorama only, and local device rules are modified on local firewalls only.

Answer: CD

QUESTION 389

The administrator profile "SYS01 Admin" is configured with authentication profile "Authentication Sequence SYS01," and the authentication sequence SYS01 has a profile list with four authentication profiles:

- Auth Profile LDAP
- Auth Profile Radius
- Auth Profile Local
- Auth Profile TACACS

After a network outage, the LDAP server is no longer reachable. The RADIUS server is still reachable but has lost the "SYS01 Admin" username and password.

What is the "SYS01 Admin" login capability after the outage?

- A. Auth KO because RADIUS server lost user and password for SYS01 Admin
- B. Auth OK because of the Auth Profile TACACS
- C. Auth OK because of the Auth Profile Local
- D. Auth KO because LDAP server is not reachable

Answer: C

QUESTION 390
