QUESTION 11

DRAG DROP

You create an app with multiple screens.

Test users report that the size and type of gallery displayed on each screen are different. You must improve the consistency for the app screens.

You need to create a reusable gallery that displays information based on the current record.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Select and Place:

Actions

- Add a gallery control.
- Add an input property.
- Create a component.
- Add a screen.
- Create a form.
- Add an output property.

Answer Area

Correct Answer:

Actions

Add a gallery control.
Add an input property.
Create a component.
Add a screen.
Create a form.
Add an output property.

Answer Area

Add a gallery control.
Add a screen.
Add an input property.

Explanation**Explanation/Reference:**

Explanation:

Step 1: Add a gallery control Add a gallery to a blank screen

1. On the Insert tab, select Gallery, and then select Vertical.
2. On the Properties tab of the right-hand pane, open the Items list, and then select your Gallery

Step 2: Add a screen Add a gallery in a screen

1. On the Home tab, select New screen > List screen.

A screen that contains a Gallery control and other controls, such as a search bar, appears.

Step 3: Add an input property

Input property is how a component receives data to be used in the component.

Incorrect Answers:

Output property is used to emit data or component state. For example, the Selected property on a Gallery control is an output property.

QUESTION 12

You use a Microsoft SharePoint list to record information about customers.

You must perform a series of actions only when a new item is added to a SharePoint list. You need to configure a Power Automate flow.

Which trigger should you use?

- A. When an item is created
- B. When an item is created or modified
- C. When a file is created (properties only)
- D. For a selected item

Correct Answer: A

Explanation

<https://www.braindump2go.com/pl-100.html>

Explanation/Reference:

Explanation:

Trigger - When an item is created

Triggers when an item is created.

MS Flow will trigger when an item is created in the list. It will return all list item properties which can be used in the Flow.

Incorrect Answers:

D: Trigger - For a selected item

This trigger allows you to start a flow for a selected item in a SharePoint list or library. You can use the columns of the list or library as output parameters. For a file, you can use the "identifier" column to get file content.

This is basically one which will trigger a flow when an item is selected and you want the user to trigger workflow manually.

QUESTION 13

A company has a Common Data Service custom entity that stores customer account data. You need to

create a relationship between the custom entity and the Account entity.

Which two tools can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Power Platform Admin center
- B. Power Apps solution explorer
- C. Power Apps Maker portal
- D. SQL Server Management Studio
- E. Visual Studio Code

Correct Answer: BC

Explanation

Explanation/Reference:

Explanation:

There are two designers you can use to create and edit 1:N (one-to-many) or N:1 (many-to-one) relationships:

You can create and edit 1:N (one-to-many) or N:1 (many-to-one) entity relationships in Power Apps portal

You can create and edit create and edit 1:N (one-to-many) or N:1 (many-to-one) entity relationships using solution explorer

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/create-edit-1n-relationships>

QUESTION 14

You create a canvas app for technicians at a computer store. You assign technicians cases to work on. The technicians update cases at the end of customer site visit.

The manager wants the technicians to sell warranties to the customers. If a customer agrees to purchase a warranty, technicians use the canvas app to immediately alert the sales team, and then the technician records details about the warranty into the app.

You need to create a flow to alert the sales team. Which type

of trigger should you use?

<https://www.braindump2go.com/pl-100.html>

- A. Flow button for mobile
- B. Power Apps
- C. Office 365 Outlook
- D. Common Data Service

Correct Answer: A

Explanation

Explanation/Reference:

Explanation:

Create a button flow to run routine tasks by simply tapping a button. Customize your flow by allowing the user to provide specific details that will be used when the flow runs.

Note: There are many repetitive tasks that we all wish we could run with just a tap of a button. For example, you may need to quickly email your team to remind them to join the daily team sync, or you may want to start a new Visual Studio Codespaces build of your code base after you've been notified that there are no more checkins planned for the day. Button flows allow you to accomplish these and many other tasks simply by tapping a button on your mobile device.

<https://docs.microsoft.com/en-us/power-automate/button-flow-with-user-input-tokens>

QUESTION 15

HOTSPOT

A coworker creates a canvas app.

The canvas app contains the following formula. The formula is attached to the OnVisible property of the first screen that users see:

```
Collect(
  Toolbox,
  {
    Tool: "Hammer",
    Quantity: 1
  },
  {
    Tool: "Screwdriver",
    Quantity: 2
  }
)
```

You are updating the canvas app.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area	Yes	No
The formula will update multiple records in a data source named Toolbox if the records exist.	<input type="radio"/>	<input type="radio"/>
A local collection is created to store data if a data source named Toolbox does not already exist.	<input type="radio"/>	<input type="radio"/>
If a collection named Toolbox exists the formula will clear any existing records before making any changes.	<input type="radio"/>	<input type="radio"/>

<https://www.braindump2go.com/pl-100.html>

Correct Answer:

Answer Area

The formula will update multiple records in a data source named Toolbox if the records exist.

Yes

No

☐
☒

A local collection is created to store data if a data source named Toolbox does not already exist.

☒
☐

If a collection named Toolbox exists the formula will clear any existing records before making any changes.

☐
☒

Explanation

Explanation/Reference:

Explanation:

Box 1: No

Records are added, not updated.

Box 2: Yes

The Collect function adds records to a data source. Syntax:

Collect(DataSource, Item, ...)

DataSource – Required. The data source that you want to add data to. If it doesn't already exist, a new collection is created.

Item(s) - Required. One or more records or tables to add to the data source.

Box 3: No

No records are cleared.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-clear-collect-clearcollect>

QUESTION 16

You are an app maker.

You want to create apps and track customizations as part of the default solution. You need

to determine the impact of performing the work in the default solution. What should you

conclude?

- A. The default solution does not contain all components and customizations from all solutions in the environment.
- B. The prefix used when creating components as part of the default solution can be set to a specific value.
- C. The default solution cannot be exported and distributed to another environment.

Correct Answer: C

Explanation

Explanation/Reference:

Explanation:

Default Solution. This is a special solution that contains all components in the system. The default solution is useful for discovering all the components and configurations in your system.

Why you shouldn't use the default solutions to manage customizations

There are a few reasons why you shouldn't create apps and make customizations in either of the default solutions:

The default solution can't be exported; therefore, you can't distribute the default solution to another environment.

The default solution contains all components and customizations from all solutions in the environment. By default, all

enabled users can create apps and customize components in the Common Data Services Default Solution. It's difficult to locate or identify the customizations you've made in the environment by using either default solution. When you use either default solution to create components, you'll also use the default publisher assigned to the solution. This often results in the wrong publisher prefix being applied to some components.

<https://docs.microsoft.com/en-us/power-platform/alm/use-solutions-for-your-customizations>

QUESTION 17

You are creating an app for an organization's human resources (HR) department. You create an Employee entity in an unmanaged Common Data Service solution.

Another user creates the following Power Automate flows separately from the solution:

Flow	Description
FlowA	Send email to the HR manager when a new document is uploaded to Microsoft SharePoint.
FlowB	Send email to the HR manager after a user selects a document in Microsoft OneDrive for Business and runs the flow.
FlowC	Send email to the HR manager at 8 AM daily if new documents are uploaded in Microsoft OneDrive for Business since the previous day.
FlowD	Send email to the HR manager when a new employee record is added.

You need to incorporate the flows that can be added to the solution.

Which two flows can you include? Each correct selection presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. FlowA
- B. FlowB
- C. FlowC
- D. FlowD

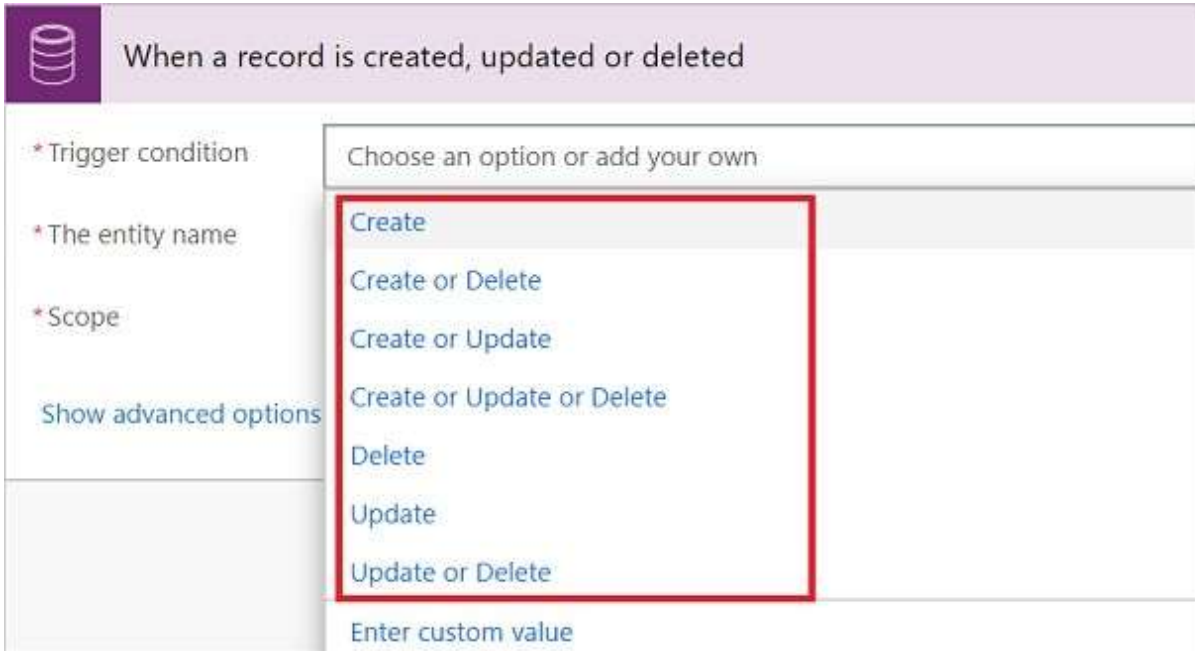

Correct Answer: AD

Explanation

Explanation/Reference:

Explanation:

You can add any of these conditions to determine precisely when your flow is triggered.

When a record is created, updated or deleted

* Trigger condition: Choose an option or add your own

- Create
- Create or Delete
- Create or Update
- Create or Update or Delete
- Delete
- Update
- Update or Delete

Show advanced options

Enter custom value

Reference:

<https://docs.microsoft.com/en-us/power-automate/connection-cds-native>

QUESTION 18

You create a canvas app named **Hardware Order** that suggests computer hardware to customers.

A value must be entered for the EmployeeID field when creating a new order if the value in the OrderType field does not contain the prefix **test**.

You need to configure the business rule.

Which two actions should you perform? Each correct answer presents part of the complete solution.

NOTE: Each correct selection is worth one point.

- A. Set the scope of the business rule to **Entity**.
- B. Add a Recommendation action and configure it to enter the order type.
- C. Set the scope of the business rule to **All Forms**.
- D. Use the following condition expression:
(OrderType Does not begin with [test]) AND (Modified By Does not contain data)

Correct Answer: AD

Explanation

Explanation/Reference:

Explanation:

A: If you're building a Canvas app, you must use Entity as the scope. D: A

business rule needs a condition.

<https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/data-platform-create-business-rule>

QUESTION 19

DRAG DROP

[PL-100 Exam Dumps](#) [PL-100 Exam Questions](#) [PL-100 PDF Dumps](#) [PL-100 VCE Dumps](#)

<https://www.braindump2go.com/pl-100.html>

You are configuring a new Common Data Service environment by using the Power Apps Maker portal.
You need to create an entity that uses the prefix **xyz**.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:**Actions**

- Create an entity in the new solution.
- Enter the entity Display Name and use the existing prefix.
- Add a new solution.
- Enter the entity Display Name and modify the prefix to **xyz**.
- Add a new publisher with the prefix **xyz**.

Answer Area**Correct Answer:****Actions**

- Create an entity in the new solution.
- Enter the entity Display Name and use the existing prefix.
- Add a new solution.
- Enter the entity Display Name and modify the prefix to **xyz**.
- Add a new publisher with the prefix **xyz**.

Answer Area

- Add a new publisher with the prefix **xyz**.
- Add a new solution.
- Create an entity in the new solution.
- Enter the entity Display Name and modify the prefix to **xyz**.
